A Practical Guide for Classroom Teachers Routledge

Measurement-based assessment has dominated our educational systems at the expense of the learning and the well-being of students and teachers. In this book, Gergen and Gill propose a radical alternative to this broken system, which is based instead on an inspirational conception of schools as sites of collective meaning-making and a relational orientation to evaluation. The authors acknowledge that it is within the process of relating that the world comes to be meaningful for us, and equally, learning and well-being are embedded in relational process, which testing and grades undermine. Providing detailed illustrations using cases from pioneering schools around the globe at both the primary and secondary level, this book demonstrates how a relational orientation to evaluation in education can enhance learning processes, foster students' engagement, vitalize relationships, and elevate the

evaluation of teaching and the school as a whole. Featuring collaborative learning, dialogic pedagogy, and flexible curricula, relational evaluation truly speaks to the demands of a rapidly changing world.

Learning disabilities are among the most common disabilities

experienced in childhood and adulthood. Although identifying learning disabilities in a school setting is a complex process, it is particularly challenging in low- and middle-income countries that lack the appropriate resources, tools, and supports. This guide provides an introduction to learning disabilities and describes the processes and practices that are necessary for the identification process. It also describes a phased approach that countries can use to assess their current screening and evaluation services, as well as determine the steps needed to develop, strengthen, and build systems that support students with learning disabilities. This guide also provides intervention recommendations that teachers and school administrators can implement at each phase of system development. Although this guide primarily addresses learning disabilities, the practices, processes, and systems described may be also used to improve the identification of other disabilities commonly encountered in schools.

Winner of the SAGE/ILTA Award for Best Book on Language Testing 2009 This volume focuses on the social aspects of language testing, including assessment of socially situated language use and societal consequences of language tests. The authors argue that traditional approaches to ensuring social fairness in tests go some way to addressing social concerns, but a broader perspective is necessary to examine the functions of tests on a societal scale. Considers these issues in relation to language assessment in oral proficiency interviews, and to the assessment of second language pragmatics. Argues that

Teaching and learning within higher education continues to evolve with innovative and new practices such as flipped teaching. This book contributes to the literature by developing a much deeper understanding of the complex phenomenon of flipped classroom approaches within higher education. It also serves as a practical guide to implementing flipped classroom teaching in academic practice across different higher educational institutions and disciplines. Part 1 of this book (Practice) describes the considerations involved in flipped classroom teaching, including the challenges faced in transforming teaching and learning within higher education. Further, it reviews the educational concepts on which the flipped classroom is based, including a selected history of similar innovations in the past. The final sections of Part 1 explore the tools needed for flipping, the design steps, assessment methods and the role of reflective practice within flipped teaching environments. Part 2 of the book (Practices) provides a range of case studies from higher educational institutions in different countries and disciplines to demonstrate the many shapes and sizes of flipped classrooms. Many of the challenges, such as engaging students in their own learning

and shifting them from spectators in the learning process to active participants, prove to be universal.
