"It may be that I have stumbled upon an adequate description of life itself." These modest yet profound words trumpet an imminent paradigm shift in scientific, economic, and technological thinking. In the tradition of Schr ö dinger's classic *What Is Life?*, Kauffman's *Investigations* is a tour-de-force exploration of the very essence of life itself, with conclusions that radically undermine the scientific approaches on which modern science rests--the approaches of Newton, Boltzman, Bohr, and Einstein. Building on his pivotal ideas about order and evolution in complex life systems, Kauffman finds that classical science does not take into account that physical systems--such as people in a biosphere--effect their dynamic environments in addition to being affected by them. These systems act on their own behalf as autonomous agents, but what defines them as such? In other words, what is life? Kauffman supplies a novel answer that goes beyond traditional scientific thinking by defining and explaining autonomous agents and work in the contexts of thermodynamics and of information theory. Much of *Investigations* unpacks the progressively surprising implications of his definition. Significantly, he sets the stages for a technological revolution in the coming decades. Scientists and engineers may soon seek to create autonomous agents--both organic and mechanical--that can not only construct things and work, but also reproduce themselves! Kauffman also lays out a foundation for a new concept of organization, and explores the requirements for the emergence of a general biology that will transcend terrestrial biology to seek laws governing biospheres anywhere in the cosmos. Moreover, he presents four candidate laws to explain how autonomous agents co-create their biosphere and the startling idea of a "co-creating" cosmos. A showcase of Kauffman's most fundamental and significant ideas, *Investigations* presents a new way of thinking about the fundamentals of general biology that will change the way we understand life itself--on this planet and anywhere else in the cosmos.

Reading Statistics and Research Pearson Education

An indispensable guide for professionals using the popular Behavior Assessment System for Children (BASC), this book provides in-depth coverage of all BASC components, their uses, clinical and research applications, and interpretation. Written by BASC originators Cecil R. Reynolds and Randy W. Kamphaus, the book demonstrates the use of the system in clinical work with children with ADHD, behavior problems, depression, and many other conditions. Important research studies are presented and applications discussed for program evaluation, screening and early intervention research, diagnosis, treatment design, and treatment monitoring. The book contains numerous illustrative case studies. Other invaluable features are tables guiding the interpretation of deviant scores for each scale; several new subscales, including a Frontal Lobe/Executive Function scale; detailed coverage of forensic applications; and useful appendices, including a Spanish-language informational handout for parents.
