This edited volume examines new ways of teaching mathematics through a cross-cultural reciprocal learning project between sister schools in Canada and China. Situating teacher learning in the intersection of the two different school systems, curriculums, and cultures of mathematics learning and teaching in both nations, this volume offers teachers a unique and much-needed perspective on how practices between countries become more and more likely shaped by each other in the emerging global society. Born out of a comparative study project sponsored by the SSHRC, this volume compiles five years' worth of findings from reciprocal partnerships between researchers, teachers, school administrators, and students from both nations. Through the process of reciprocal learning and narrative inquiry, the research described in these chapters illuminates the unknown and shares newly-created mathematics education knowledge.

Principles of Management is designed to meet the scope and sequence requirements of the introductory course on management. This is a traditional approach to management using the leading, planning, organizing, and controlling approach. Management is a broad business discipline, and the Principles of Management course covers many management areas such as human resource management and strategic management, as well as behavioral areas such as motivation. No one individual can be an expert in all areas of management, so an additional benefit of this text is that specialists in a variety of areas have authored individual chapters. This is an adaptation of Principles of Management by OpenStax. You can access the textbook as pdf for free at openstax.org. Minor editorial changes were made to ensure a better ebook reading experience. Textbook content produced by OpenStax is licensed under a Creative Commons Attribution 4.0 International License.

Making Mathematics Meaningful? For Students in the Primary Grades shares practical suggestions and unique strategies that will contribute to making mathematics meaningful for young learners. Werner Liedtke is a former elementary educator who has partnered with primary teachers in the classroom environment and authored and co-authored several books and articles about mathematics teaching, learning and assessment, and specific aspects of the mathematics curriculum. He brings a wealth of expertise while sharing valuable information that helps educators, tutors, and parents who homeschool, reach the major goals of the mathematics curriculum. Liedtke includes suggestions for accurate assessment and reporting as well as prompts that illustrate question strategies, all while providing fun and imaginative activities that will help students: - Develop number sense - visualize numbers. - Develop spatial sense - imagery and visual thinking. - Learn basic addition and subtraction facts. - Develop mental mathematics

strategies. - Foster problem solving abilities, confidence, and mathematical reasoning. The strategies and activities included in this compendium will not only help young learners reach success with mathematics and encourage creative thinking, but will also contribute to their language development, reading comprehension, and the development of evaluative skills.

Introducing Preschool Language Scale Longman

This book collects recent research on posing and solving mathematical problems. Rather than treating these

two crucial aspects of school mathematics as separate areas of study, the authors approach them as a unit where both areas are measured on equal grounds in relation to each other. The contributors are from a vast variety of countries and with a wide range of experience; it includes the work from many of the leading researchers in the area and an important number of young researchers. The book is divided in three parts, one directed to new research perspectives and the other two directed to teachers and students, respectively.

Ready-to-go English Language Development tasks that focus on students "doing the doing" of talking, reading, listening, and responding. In recent years, the percentage of English Language Learners (ELLs) has increased in almost every state, so most teachers are faced with the challenge of teaching literacy to students acquiring English alongside English-speaking students. However, in many integrated learning situations, English Language Development (ELD) instruction is strikingly different than the teaching we provide students whose first language is English. The Big Book of Tasks for English Language Development helps teachers meet that challenge head-on! Bestselling author and esteemed education consultant Nancy Akhavan shows that teaching multilingual learners requires changing our instruction to focus on practices that have high impact for students as they acquire language. Yet it's not about doing more— it's about doing smarter. It's about having high expectations for all students and providing scaffolds to support students at all levels of English language proficiency as they learn and grow more confident. All the ready-to-go activities in the book Center on active tasks where students do the thinking, talking, reading, and writing, with appropriate support Activate the domains of language — listening, speaking, reading, and writing — and recognize that these do not develop at the same rate Honor the continuum of language development and build on what students can do Provide teaching tools such as learning targets, suggestions for when to use a task, basic instructions and "teacher talk" for

launching a task, and "Watch Fors and Work-Arounds" Focus on the linguistic assets multilingual learners bring to the classroom and provide opportunities to help them collaborate with peers With Nancy Akhavan's signature straightforward, teacher-friendly style, this book offers an uplifting reminder that with the right teaching strategies, educators can support multilingual learners to achieve their full potential and thrive in their learning journeys.
