Debates in Science Education McGraw-Hill Education

This book examines the increasing popularity of creativity and play in tertiary learning, and how it can be harnessed to enhance the student experience at university. While play is often misunderstood as something 'trivial' and associated with early years education, the editors and contributors argue that play contributes to social and human development and relations at a fundamental level. This volume invalidates the commonly held assumption that play is only for children, drawing together numerous case studies from higher education that demonstrate how researchers, students and managers can benefit from play as a means of liberating thought, overturning obstacles and discovering fresh approaches to persistent challenges. This diverse and wide-ranging edited collection unites play theory and practice to address the gulf in research on this fascinating topic. It will be of interest and value to educators, students and scholars of play and creativity, as well as practitioners and academic leaders looking to incorporate play into the curriculum.

This book offers a conceptual and practical guide to the systematic review process and its application to sport, exercise, and physical activity research. It begins by describing what systematic reviews are and why they assist scientists and practitioners. Providing step-by-step instructions the author leads readers through the process, including generation of suitable review questions; development and implementation of search strategies; data extraction and analysis; theoretical interpretation; and result dissemination. *Conducting Systematic Reviews in Sport, Exercise, and Physical Activity* clarifies several common misunderstandings including the difference between qualitative systematic reviews and meta-analyses. Each chapter begins with a set of learning objectives focused on practical application, illustrated with examples from reviews published within the sport, exercise, and physical activity fields. Once a reader has completed all the learning activities along the way, they will have designed a systematic review and have written a protocol ready for registration. The book ends with a collection of advice from internationally regarded scientists with substantial experience in systematic reviews.
