(Re)producing a Periphery Addison-Wesley Longman

Using visual ethnography, this book explores the many forms of pleasures that boys derive in and through the spaces and their bodies in physical education.

Employing the works of Michel Foucault and Judith Butler, Gerdin examines how pleasure is connected to identity, schooling, and power relations, and demonstrates how discourses of sport, fitness, health and masculinity work together to produce a variety of pleasurable experiences. At the same time, the book provides a critique of such pleasurable experiences within physical education by illustrating how these pleasures can still, for some boys, quickly turn into displeasures and can be associated with exclusion, humiliation, bullying and homophobia. Boys, Bodies, and Physical Education argues that pleasure can both be seen as an educational and productive practice in physical education but also a constraint that both engenders and privileges some boys over others as well as (re)producing narrow and limited conceptions of masculinity and pleasures for all boys. This book works to problematize these pleasures and their articulations with gender, bodies, and spaces.

Public Space and the Culture of Childhood Routledge

As everything from immigration, airport security and road tolling become headline news, the need to understand mobility has never been more pertinent. Yet 'mobility' remains remarkably elusive in summary and definition. This introductory text makes 'mobility' tangible by explaining the key theories and writings that surround it. This book traces out the concept of mobility as a key idea within the discipline of geography as well as

subject areas from the wider arts and social sciences. The text takes an interdisciplinary approach to draw upon key writers and thinkers that have contributed to the topic. In analyzing these, it develops an understanding of mobility as a relationship through which the world is lived and understood. Mobility is organized around themed chapters discussing – 'Meanings', 'Politics', 'Practices' and 'Mediations', and the book identifies the evolution of mobility and its implications for theoretical debate. These include the way we think about travel and embodiment, to regarding issues such as power, feminism and post-colonialism. Important contemporary case-studies are showcased in boxes. Examples range from the mobility politics evident in the evacuation of the flooding of New Orleans, xenophobia in Southern Africa, motoring in India, to the new social relationships emerging from the mobile phone. The methodological quandaries mobility demands are addressed through highlighted boxes discussing both qualitative and quantitative research methods. Arguing for a more relational notion of the term, the book understands mobility as a keystone to the examination of issues from migration, war and transportation; from communications and politics to disability rights and security. Key concept and case-study boxes, further readings, and central issue discussions allow students to grasp the central importance of 'mobility' to social, cultural, political, economic and everyday terrains. The text also assists scholars of Geography, Sociology, Cultural Studies, Planning, and Political Science to understand and engage with this evasive concept.

This book offers students and practitioners a sophisticated and convincing framework for rethinking the usual approaches to resource management. It uses case studies to argue that professional resource managers do not take responsibility for the social and environmental consequences of their decisions on the often vulnerable indigenous communities they affect. It also discusses the invisibility of indigenous people's values and knowledge within traditional resource management. It offers a new approach to social impact assessment methods which are more participatory and empowering. The book employs a range of case studies from Australia, North America and Norway.

Theories and Practices of Development Routledge

Throughout the twentieth century, governments sought to achieve 'development' not only in their own countries, but also in other regions of the world; particularly in Africa, Asia, Latin America and the Caribbean. This focus on 'development' as a goal has continued into the twenty-first century, for example through the United Nations Millennium Development Targets. While development is often viewed as something very positive, it is also very important to consider the possible detrimental effects it may have on the natural environment, different social groups and on the cohesion and stability of societies. In this important book, Katie Willis investigates and places in a historical context, the development theories behind contemporary debates such as globalization and transnationalism. The main definitions of 'development' and 'development theory' are outlined with a description and explanation of how approaches have changed over time. The differing explanations of inequalities in development, both spatially and socially, and the reasoning behind different development policies are also considered. By drawing on pre-twentieth century European development theories and examining current policies in Europe and the USA, the book not only stresses commonalities in development theorizing over time and space, but also the importance of context in theory construction. This topical book provides an ideal introduction to development theories for students in geography, development studies, area studies, anthropology and sociology. It contains student-friendly features, including boxed case studies with examples, definitions, summary sections, suggestions for further reading, discussion questions and website information.

The Complete Idiot's Guide to Geometry Emerald Group Publishing

An innovative introduction to Human Geography, exploring different ways of

studying the relationships between people and place, and putting people at the centre of human geography. The book covers behavioural, humanistic and cultural traditions, showing how these can lead to a nuanced understanding of how we relate to our surroundings on a day-to-day basis. The authors also explore how human geography is currently influenced by 'postmodern' ideas stressing difference and diversity. While taking the importance of these different approaches seriously as ways of thinking about the role of place in peoples' everyday lives, the book also tries to encapsulate what has been so vibrant and exciting about human geography over the last couple of decades. By using examples to which students can relate - such as how they imagine and represent their home, the way they avoid certain spaces, how they move through retail spaces, where they choose to go to university, how they use the Internet, how they represent other nations and so on - the authors show how geography shapes everyday life in a manner that is seemingly mundane yet profoundly important.

Children are at the heart of popular and public debates in North America and Europe about the culture of public space. On the one hand there is increased anxiety about children's vulnerability to stranger danger, on the other there is a rising tide of fear about out of control and dangerous youth. This book addresses both these debates about children's role in public space, setting them within an academic framework and drawing on a range of interdisciplinary work on childhood, young people and parenting. It is therefore relevant to practitioners and policy makers concerned with the nature and future of public space, and to academics researching or teaching about childhood, family or public space in the disciplines of sociology, social policy and geography.

The Archaeology of Time Travel Pearson

In an increasingly ethnically diverse society, debates about migration, community, cultural difference and social interaction have never been more pressing. Drawing on the findings from a two-year, qualitative Economic and Social Research Council funded study of different locations across England, Lived Experiences of Multiculture uses interdisciplinary perspectives to examine the ways in which complex urban populations experience, negotiate, accommodate and resist cultural difference as they share a range of everyday social resources and public spaces. The authors present novel ways of re-thinking and developing concepts such as multiculturalism, community and conviviality, whilst also repositioning debates which focus on conflict models for understanding cultural differences. Amidst highly charged arguments over the social relations of belonging and the meanings of local and national identities, this timely volume will appeal to advanced undergraduate students and graduate students interested in fields such as Race and Ethnicity Studies, Sociology, Urban Studies, Human Geography and Migration Studies.

Geopolitics and Development Palgrave MacMillan

The outcomes of globalization are neither smooth nor unilinear; rather, they are dialectical, multifaceted, uneven, and sometimes chaotic, pointing in several different directions at once. Neoliberalism and Globalization in Africa examines Africa's involvement in neoliberal globalization, and highlights the socioeconomic and cultural costs of the grossly unbalanced structure of global wealth and power between Africa and the rest of the world. The narratives in the book pay special attention to contestations-both discursively and in practice. And with the emphasis on contestation, readers will come to appreciate the tactics and maneuvers deployed by African social resistance movements to interrogate and confront contemporary neoliberal globalization.

Creation and access to green spaces promotes individual human health, especially in therapeutic contexts among those suffering traumatic events. But what of the role of access to green space and the act of creating and caring for such places in promoting social health and well-being? Greening in the Red Zone asserts that creation and access to green spaces confers resilience and recovery in systems disrupted by violent conflict or disaster. This edited volume provides evidence for this assertion through cases and examples. The contributors to this volume use a variety of research and policy frameworks to explore how creation and access to green spaces in

extreme situations might contribute to resistance, recovery, and resilience of social-ecological systems.

This volume gathers a collection of the most seminal essays written by leading experts in the field, which identify or signal many of the changing directions of regional research in geography during the past fifty years. Various forms of 'new regionalism' or 'new regional geography' have emerged over the last several decades, especially in political and economic geography, but in general the region has been a concept in declining use. Despite this, the region has gained new currency in sub-areas of political and economic geography and a so-called 'new regionalism' has emerged in studies of the changing nature of the nation-state in a globalizing economy. Taken together, the essays in this volume provide the reader with a comprehensive overview of academic developments in this area of geographical research.

Prentice Hall Geometry Addison-Wesley Longman

This volume explores the relevance of time travel as a characteristic contemporary way to approach the past. If reality is defined as the sum of human experiences and social practices, all reality is partly virtual, and all experienced and practiced time travel is real. In that sense, time travel experiences are not necessarily purely imaginary. Time travel experiences and associated social practices have become ubiquitous and popular, increasingly replacing more knowledge-orientated and critical approaches to the past. Papers discuss the implications and problems associated with the ubiquity and popularity of time travelling and whether time travel is inherently conservative because of its escapist tendencies, or whether it might instead be considered as a fulfilment of the contemporary Experience or Dream Society. Whatever position one may take, time travel is a legitimate and timely object of study and critique because it represents a particularly significant way to bring the past back to life in the present.

Strategies for Success, Second Edition provides a series of study skills activities designed to foster student success in college mathematics. Lynn Marecek and MaryAnne Anthony-Smith encourage students to take an active approach in determining what they need to do to become successful math students. These proven, class-tested activities have been developed over many semesters from the authors' firsthand experience with their own students. This workbook contains 44 activities, in ready-to-use worksheet format. The activities can be used in several ways – individual work, group work, or large group discussion. They can be used in class or assigned as homework. An accompanying Instructor's Guide is available that contains

instructions and implementation strategies for each activity to help instructors easily integrate Strategies for Success into their classes. Some of the topics covered include Notebook Preparation, Reading a Math Textbook, Successful Student Behavior, Time Management, Test Preparation Skills, Study Group Ideas, and much more. The Second Edition also includes several new activities that focus on specific study skills needed by students doing their homework exercises on a computer in online, hybrid, emporium, or redesign formats.
