the envelope of gases that surrounds the planet. Earth's atmosphere is made up of nitrogen, oxygen,

_____, water vapor, and many other gases, as well as particles of liquids and solids. carbon dioxide. ozone. a form of oxygen that has three oxygen atoms in each molecule instead of the usual two.
[Weather Factors Water in the Atmosphere - Weebly](#)
Earth’s atmosphere makes conditions on Earth suitable for living things. The atmosphere contains oxygen and other gases that living things need. The atmosphere also traps energy from the sun, which keeps Earth’s surface warm and Earth’s water in liquid form, another requirement of living things.

Weather is the condition of Earth's atmosphere at a particular time and place. Earth's atmosphere is the envelope of gases that surrounds the planet. Earth's atmosphere is made up of nitrogen, oxygen, carbon dioxide, water vapor, and many other gases, as well as particles of liquids and solids. Nitrogen makes up about three fourths of the air.
18: Global Climate Change - Pearson Education
Description. The Atmosphere: An Introduction to Meteorology remains the definitive introductory meteorology text, reinforcing basic concepts with everyday, easy-to-grasp examples. This revision retains the hallmark features professors have come to expect from Tarbuck and Lutgens: a friendly, largely non-technical narrative,...

As air pressure decreases, so does density. Sea-level air has the weight of the whole atmosphere pressing on it, so air pressure is highest at sea level. Air pressure is much lower at the tops of mountains. There the low density of air can make it hard to breathe because there is less oxygen in each cubic meter of air.
