A pendulum will be the mechanical system that is employed in this experiment. It consists of a large mass suspended from a stationary point by a relatively massless string. The center of mass of the pendulum will be located directly below the suspension point when the mass is in its equilibrium position.

Play with one or two pendulums and discover how the period of a simple pendulum depends on the length of the string, the mass of the pendulum bob, the strength of gravity, and the amplitude of the swing. Observe the energy in the system in real-time, and vary the amount of friction. Measure the period using the stopwatch or period timer.
