The effects of periglaciation on the British landscape are synthesised in this 1997 text.

John Shaw's Nature Photography Field Guide Peachpit Press

Among the fishes, a remarkably wide range of biological adaptations to diverse habitats has evolved. As well as living in the conventional habitats of lakes, ponds, rivers, rock pools and the open sea, fish have solved the problems of

life in deserts, in the deep sea, in the cold antarctic, and in warm waters of high alkalinity or of low oxygen. Along with these adaptations, we find the most impressive specializations of morphology, physiology and behaviour. For example we can marvel at the high-speed swimming of the marlins, sailfish and warm-blooded tunas, air-breathing in catfish and lungfish, parental care in the mouth-brooding cichlids and viviparity in many sharks and toothcarps. Moreover, fish are of considerable importance to the survival of the human species in the form of

nutritious and delicious food of interest in industrial and numerous kinds. Rational exploitation and management of our global stocks of fishes must rely upon a detailed and precise insight of their biology. The Chapman and Hall Fish and Fisheries Series aims to present timely volumes reviewing important aspects of fish biology. Most volumes will be of interest to research workers in biology, zoology, ecology and physiology but an additional aim is for the books to be accessible to a wide spectrum of non specialist readers ranging from undergraduates and postgraduates to those with an commercial aspects of fish and fisheries.

Earth Observation interacts with space, remote sensing, communication, and information technologies, and plays an increasingly significant role in Earth related scientific studies, resource management, homeland security, topographic mapping, and development of a healthy, sustainable environment and community.

Geospatial Technology for Earth Observation provides an in-depth and broad collection of recent progress in Earth observation. Contributed by leading experts in this field, the book covers satellite, airborne and ground remote sensing systems and system integration, sensor orientation, remote sensing physics, image classification and analysis, information extraction, geospatial service, and various application topics, including cadastral mapping, land use change evaluation, water

environment monitoring, flood mapping, and decision making support. Geospatial Technology for Earth Observation serves as a valuable training source for researchers, developers, and practitioners in geospatial science and technology industry. It is also suitable as a reference book for upper level college students and graduate students in geospatial technology, geosciences, resource management, and informatics.

An updated bestseller, this book of extraordinarily beautiful photographs of nature contains state-of-the-art instruction on how any photographer can aim for equally impressive results every time a camera is focused on the great outdoors. Even highly skilled photographers are often baffled by

the problems facing them when they work outdoors. But with this exceptional field guide in hand, every photographer—beginner, serious amateur, semi-pro, and pro—can conquer the problems encountered in the field. Using his own exceptional work as examples, the author discusses each type of nature subject and how to approach photographing it. Specific advice and information cover selection of equipment and lenses; how to compose a shot; how to get close ups; and other tips covering a range of techniques to enrich various types of nature photographs.

This work examines the roles that American businesses and photojournalists played in the early overseas marketing of the Japanese-built Nikon camera and its Nikkor optics between 1946 and 1951. Particular attention is paid to the San Francisco-based Overseas Finance and Trading Company, which was the major U.S. importer of Nikon products between 1949 and 1953. The work also details the roles of Overseas Finance leaders Hans Liholm and Adolph Gasser in providing marketing and technical guidance to Nikon in the company's formative years.

McFarland

Fish accomplish most of their basic behaviors by swimming. Swimming is fundamental in a vast majority of fish species for avoiding predation, feeding, finding food, mating, migrating and finding optimal physical environments. Fish exhibit a wide variety of swimming patterns and behaviors. This treatise looks at fish swimming from the behavioral and Motivational Systems Peachpit Press This well-written and lively account of the principles of how motivational systems operate includes discussions of both theories and empirical results

from individual systems. The book deals with motivation at all levels from the physiological to that of mathematical modelling and explains complex ideas lucidly.

Microsoft Exchange 2000

Infrastructure Design explains from a system designer's and administrator's perspective

Microsoft's Active Directory and its interaction with Exchange 2000, details issues concerned with migration to Exchange 2000, and outlines the specific technology and design issues relating to connectivity with Exchange 2000.

Readers will learn to use these

technologies to seamlessly co-exist with their current environment, migrate to a native Exchange 2000 environment, and connect to the Internet as well as to other messaging systems. The book's blend of expert instruction and best practices will help any organization create optimal system designs and configurations to support different technical and business scenarios. McCorry and Livengood are experts in Microsoft technologies from Compaq, the world's leading integrator of Exchange systems. In Microsoft Exchange 2000 Infrastructure Design, they spell out the key technologies, features, and

techniques IT professionals must master to build a unified and robust Exchange 2000 messaging service. This book details the framework organizations must put in place to most effectively move to Exchange 2000. Detailed explanations of Active Directory integration with Exchange 2000, migration to Exchange 2000 from another system and Exchange 2000 transport, connectivity, and tools Gives readers the benefit of authors' extensive experience Unique description of the software "plumbing" organizations must master to move to Exchange 2000 Popular Photography

Lighting is one of the most important creative components of any image. Joe Lavine and Brad Bartholomew, commercial photographers and instructors, offer a unique approach to learning about studio lighting. They start with their philosophy of lighting, tackling the characteristics of light and how to approach building your shots. Then they discuss some basic photographic concepts and equipment needs, and how to use this knowledge to start a successful career in photography. Packed with gorgeous images, this book provides two distinct perspectives from the authors based on their experience as studio photographers and instructors. This is not a recipe book, but instead provides

the background and technical knowledge to understand how light works and how to create your own successful images. In this guide you will learn about: Creating dimension, separation, drama, and texture in your images Color temperature, filters, flash duration, metering, and the histogram Setting up and using equipment and making choices based on the needs of your subject Building a studio on a tight budget and how to expand as your business and expertise grows This guide for beginning to intermediate shooters covers all the practical aspects of starting a photography career and setting up your first studio – with insider details to expand your photography skills and turn your

passion for images into a professional career.
