In this IBM® Redbooks® publication, we give an overview of different data management topics related to a typical SAP® data center. The intrinsic functionality of SAP is not designed to completely handle all the tasks of a data center by itself, but the SAP system offers several interface possibilities to attach external tools to it to accomplish this task. We explain SAP basic concepts and the issues with SAP data management. We introduce Tivoli® Storage Manager and all of its products that are related to SAP data management. We provide some comparison between database backup and recovery tools. Finally, we discuss data archiving using IBM DB2® CommonStore for SAP, and discuss high availability requirements and disaster recovery considerations. The second part of this book discusses a practical implementation of SAP backup and recovery with Tivoli Storage Manager. We implement this setup on two separate SAP systems: one running DB2 and the other running Oracle® database. We also implement LAN-free backup and FlashCopy® scenarios. In the sample implementation section, we show many different tasks, such as backup and restore, database recovery, backup monitoring, and tuning. We also cover some advanced backup/availability considerations, such as split mirror backup and standby databases. This book helps individuals that operate an SAP environment to devise a strategy for a sound and comprehensive data backup solution using the IBM Tivoli Storage Management product family.

The role humans play in the field of information technology continues to hold  
relevance even with the industry ' s rapid growth. People contribute heavily to the  
physical, cognitive, and organizational domain of computing, yet there is a lack of  
exploration into this phenomenon. Humanoid aspects of technology require extensive  
research in order to avoid marginalization and insufficient data. The Handbook of  
Research on the Role of Human Factors in IT Project Management is a collection of  
innovative research on the methods and applications of the task of human  
characteristics in the design and development of new technology. While highlighting  
topics including digitalization, risk management, and task analysis, this book is ideally  
designed for IT professionals, managers, support executives, project managers,  
managing directors, academicians, researchers, and students seeking current  
research on the dynamics of human influence in technological projects.
