perch are only slightly posterior and ventral to the pectorals. The entire, less pigmented ventral area is usually called the belly (not very scientific, but descriptive none-the-less). The dorsal fin is composed of two distinct sections; the anterior most section has spiny rays and posterior section has soft rays.

Answers to Dissection Questions: The general body shape of a perch is very tapered. The width of the perch is quite small, but it is long and tall. The front tapers off to the mouth, and the back tapers to the rear fin. This adaptive body shape allows for smooth and fast navigation through water. The fins allow turning, propulsion, and control as well.

### Perch Dissection Guide | Home Science Tools

Locate and note the location of the eyes. Find the bony covering on each side of the fish's head called the operculum. Cut away operculum and look at gill.

- Gill Arch.
- Gill Filament.

Find the cartilage support called the gill arch and the soft gill filaments that make up each gill. Label the parts.
