Perch Dissection Guide | Home Science Tools perch are only slightly posterior and ventral to the pectorals. The entire, less pigmented ventral area is usually called the belly (not very scientific, but descriptive none-the-less). The dorsal fin is composed of two distinct sections; the anterior most section has spiny rays and posterior section has soft rays.

Perch Dissection Answers | happyhounds.pridesource

The scientific name for the yellow perch, most often used in dissection, is *Perca flavescens* (*Perca* means " dusky " ; *flavescens* means " becoming gold colored "). The sides of the yellow perch are golden yellow to brassy green with six to eight dark vertical saddles and a white to yellow belly.

Large 9-12" Perch Dissection Specimen for Fish Anatomy Study

Answers to Dissection Questions: The general body shape of a perch is very tapered. The width of the perch is quite small, but it is long and tall. The front tapers off to the mouth, and the back tapers to the rear fin. This adaptive body shape allows for smooth and fast navigation through water. The fins allow turning, propulsion, and control as well.
