The Department of Energy's Office of Environmental Management (DOE-EM) is responsible for cleaning up radioactive waste and environmental contamination resulting from five decades of nuclear weapons production and testing. A major focus of this program involves the retrieval, processing, and immobilization of waste into stable, solid waste forms for disposal. *Waste Forms Technology and Performance*, a report requested by DOE-EM, examines requirements for waste form technology and performance in the cleanup program. The report provides information to DOE-EM to support improvements in methods for processing waste and selecting and fabricating waste forms. *Waste Forms Technology and Performance* places particular emphasis on processing technologies for high-level radioactive waste, DOE's most expensive and arguably most difficult cleanup challenge. The report's key messages are presented in ten findings and one recommendation.

Business Torts: A Fifty State Guide, 2022 Edition provides the most recent statutory and case law developments on business torts laws for each of the fifty states and the District of Columbia. Practitioner-oriented, and written by leading state experts, each chapter summarizes the variants and developments particular to a specific state jurisdiction. You will find detailed coverage of each state's standards regarding: misappropriation of trade secrets; tortious interference with contracts; fraud and misrepresentation; trade libel and commercial disparagement; breach of fiduciary duty; officers and directors liability; conversion; unfair competition, fraudulent transfer; economic loss; and statutes of limitation. The 2022 Edition incorporates recent changes in the law of the various states, including: The South Carolina Supreme Court held that plaintiffs are no longer required to plead special damages for civil conspiracy claims. The Maine Legislature passed a new law restricting an Employer's use of non-compete agreements and subjecting violations of this new law to a \$5,000 fine. The Iowa Supreme Court refused to recognize that a pastor owes a fiduciary duty to a plaintiff, as the Court would have to refer to church doctrines and practices in making that assessment, which the Court held was beyond their authority. The 6th Circuit Court of Appeals held that the Uniform Voidable Transactions Act, as adopted in part by Michigan, allows a creditor to void a fraudulent disposal of property belonging to a person who is liable on a claim. *State Laws Included: Alabama, Alaska, Arizona, Arkansas, California, Colorado, Connecticut, Delaware, Florida, Georgia, Hawaii, Idaho, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, Montana, Nebraska, Nevada, New Hampshire, New Jersey, New Mexico, New York, North Carolina, North Dakota, Ohio, Oklahoma, Oregon, Pennsylvania,*

Performance and Upgrading of Wastewater Stabilization Ponds : Proceedings of a Conference Held August 23-25, at Utah State University, Logan, Utah. Transportation Research Board

President Carter's 1980 declaration of a state of emergency at Love Canal, New York, recognized that residents' health had been affected by nearby chemical waste sites. The Resource Conservation and Recovery Act, enacted in 1976, ushered in a new era of waste management disposal designed to protect the public from harm. It required that modern waste containment systems use "engineered" barriers designed to isolate hazardous and toxic wastes and prevent them from seeping into the environment. These containment systems are now employed at thousands of waste sites around the United States, and their effectiveness must be continually monitored. Assessment of the Performance of Engineered Waste Containment Barriers assesses the performance of waste containment barriers to date. Existing data suggest that waste containment systems with liners and covers, when constructed and maintained in accordance with current regulations, are performing well thus far. However, they have not been in existence long enough to assess long-term (postclosure) performance, which may extend for hundreds of years. The book makes recommendations on how to improve future assessments and increase confidence in predictions of barrier system performance which will be of interest to policy makers, environmental interest groups, industrial waste producers, and industrial waste management industry.

Forming connections between human performance and design

Engineering Psychology and Human Performance, 4e examines human-machine interaction. The book is organized directly from the psychological perspective of human information processing. The chapters generally correspond to the flow of information as it is processed by a human being--from the senses, through the brain, to action--rather than from the perspective of system components or engineering design concepts. This book is ideal for a psychology student, engineering student, or actual practitioner in engineering psychology, human performance, and human factors Learning Goals Upon completing this book, readers should be able to: * Identify how human ability contributes to the design of technology. * Understand the connections within human information processing and human performance. * Challenge the way they think about technology's influence on human performance. * show how theoretical advances have been, or might be, applied to improving human-machine interaction

HANDBOOK OF IMPROVING PERFORMANCE IN THE

WORKPLACE Volume 3: Measurement and Evaluation Volume

Three of the Handbook of Improving Performance in the Workplace focuses on Measurement and Evaluation and represents an invaluable

addition to the literature that supports the field and practice of Instructional Systems Design. With contributions from leading national scholars and practitioners, this volume is filled with information on

time-tested theories, leading-edge research, developments, and applications and provides a comprehensive review of the most pertinent information available on critical topics, including: Measuring and Evaluating Learning and Performance, Designing Evaluation, Qualitative and Quantitative Performance Measurements, Evidence-based Performance Measurements, Analyzing Data, Planning Performance Measurement and Evaluation, Strategies for Implementation, Business Evaluation Strategy, Measurement and Evaluation in Non-Profit Sectors, among many others. It also contains illustrative case studies and performance support tools. Sponsored by International Society for Performance Improvement (ISPI), the Handbook of Improving Performance in the Workplace, three-volume reference, covers three core areas of interest including Instructional Design and Training Delivery, Selecting and Implementing Performance Interventions, and Measurement and Evaluation.

This synthesis report will be of special interest to maintenance, construction, and traffic engineers and others interested in the use of impact attenuation devices or crash cushions for highway operations. Information is provided on the performance and operational experience of 13 crash cushion devices in current use in the United States and Canada, including physical characteristics, test results, and guidelines for use. Both permanent and temporary devices are included. Crash cushions can provide a cost-effective method for reducing or alleviating motor vehicle related injuries or fatalities, which constitute a major societal cost. This report of the Transportation Research Board presents information on the physical and impact performance characteristics of 13 crash cushions in current use in North America. Information on performance evaluation guidelines, physical characteristics, performance characteristics, selection considerations, and the operational experience of individual designs for crash cushions is provided. The synthesis concludes with possible future trends for crash cushions and

appendices containing the crash test requirements of NCHRP Report 350: Recommended Procedures for the Safety Performance Evaluation of Highway Features, a crash cushion glossary, and a bibliography.

There is a great wealth of diversity in the business tort laws of all fifty states and the District of Columbia. The new 2019 Edition of Business Torts: A Fifty-State Guide helps you quickly assess the merits and pitfalls of litigation in any given jurisdiction allowing you to make the best decisions for your clients. In addition to the very significant differences in the statutes of limitation, other significant differences include: Some states have not recognized a cause of action for negligent interference with an economic advantage. Negligent misrepresentation in one state is limited to claims against persons in the business of supplying information to others. One state recognizes a cause of action for "strict responsibility misrepresentation." Another state recognizes claims of "prima facie tort" for wrongs that do not fit into traditional tort categories. And these are only a few examples of the more significant differences. Increasing costs and higher utilization of resources make the role of process improvement more important than ever in the health care

industry. *Management Engineering: A Guide to Best Practices for Industrial Engineering in Health Care* provides an overview of the practice of industrial engineering (management engineering) in the health care industry. Explaining how to maximize the unique skills of management engineers in a health care setting, the book provides guidance on tried and true techniques that can be implemented easily in most organizations. Filled with tools and documents to help readers communicate more effectively, it includes many examples and case studies that illustrate the proper application of these tools and techniques. Containing the contributions of accomplished healthcare process engineers and process improvement professionals, the book examines Lean, Six Sigma, and other process improvement methodologies utilized by management engineers. Illustrating the various roles an industrial engineer might take on in health care, it provides readers with the practical understanding required to make the most of time-tested performance improvement tools in the health care industry. Suitable for IE students and practicing industrial engineers considering a move into the health care industry, or current healthcare industrial engineers wishing to expand their practice, the text can be used as a reference to explore individual topics, as each of the chapters stands on its own. Also, senior healthcare executives will find that the book provides insights into how the practice of management engineering can provide sustainable improvements in their organizations. To get a good overview of how your organization can best benefit from the efforts of industrial engineers, this book is a must-read.

The 2021 Edition incorporates recent changes in the law of the various states, including: The Nebraska Supreme Court has recognized the tort of trade libel and commercial disparagement in a long-awaited landmark case. The Missouri legislator amended the Missouri's Merchandising Practices Act to require a consumer bringing a claim under that act to establish that they acted as a reasonable consumer would in light of all circumstances and that the business practice alleged to be unlawful would cause a reasonable person to enter into the transaction that resulted in damages. The Florida Ninth Judicial Circuit has reopened its "Business Court", a division of the Court which handles exclusively business matters. The Business Court was closed in 2017 due to budget constraints. The Hawaii Supreme Court held that a plaintiff may claim equitable tolling for fraudulent concealment. This monograph discusses the various biomass feedstocks currently available for biofuels production, and mechanical preprocessing technologies to reduce the feedstock variability for biofuels applications. Variability in the properties of biomass—in terms of moisture, particle size distribution, and low-density—results in storage, transportation, handling, and feeding issues. Currently, biorefineries face serious particle bridging issues, uneven discharge, jamming of equipment, and transportation problems. These issues must be solved in order for smooth operations to be possible. Mechanical preprocessing technologies, such as size reduction, densification, and moisture management using drying and dewatering, can help to overcome these issues. Many densification systems exist that will assist in converting low-density biomass to a high-density commodity type

feedstock. In 6 chapters, the impact of densification process variables, such as temperature, pressure, moisture, etc., on biomass particle agglomeration, the quality of the densified products, and the overall energy consumption of the process are discussed, as are the various compression models for powders that can be used for biomass particles agglomeration behavior and optimization of the densification process using statistical and evolutionary methods. The suitability of these densified products for biochemical and thermochemical conversion pathways is also discussed, as well as the various international standards (CEN and ISO) they must adhere to. The author has worked on biomass preprocessing at Idaho National Laboratory for the last ten years. He is the principal investigator for the U.S. Department of Energy Bioenergy Technologies Office-funded “Biomass Size Reduction and Densification” project. He has developed preprocessing technologies to reduce cost and improve quality. The author has published many papers and books focused on biomass preprocessing and pretreatments. Biomass process engineers and biorefinery managers can benefit from this book. Students in chemical, mechanical, biological, and environmental engineering can also use the book to understand preprocessing technologies, which greatly assist in improving the biomass critical material attributes. The book can help policymakers and energy systems planners to understand the biomass properties limitations and technologies to overcome the same.
