This is a list of the 118 chemical elements which have been identified as of 2020. A chemical element, often simply called an element, is a species of atoms which all have the same number of protons in their atomic nuclei (i.e., the same atomic number, or Z).. A popular visualization of all 118 elements is the periodic table of the elements, a convenient tabular arrangement of the elements by ...

Definition of periodic table. : an
arrangement of chemical

elements based on the periodic
law.
Periodic Table of Elements -
PubChem
Periodic table, in full periodic table
of the elements, in chemistry, the
organized array of all the chemical
elements in order of increasing
atomic number —i.e., the total
number of protons in the atomic
nucleus. When the chemical
elements are thus arranged, there is
a recurring pattern called the
“ periodic law ” in their
properties, in which elements in
the same column (group) have
similar properties.

printable periodic table of the elements

The periodic table, also known as the periodic table of elements, arranges the chemical elements such as hydrogen, silicon, iron, and uranium according to their recurring properties. The number of each element corresponds to the number of protons in its nucleus (which is the same as the number of electrons orbiting that nucleus).
