The maturation of nanotechnology has revealed it to be a unique and distinct discipline rather than a specialization within a larger field. Its textbook cannot afford to be a chemistry, physics, or engineering text focused on nano. It must be an integrated, multidisciplinary, and specifically nano textbook. The archetype of the modern nano textbook, *Introduction to Nanoscience and Nanotechnology* builds a solid background in characterization and fabrication methods while integrating the physics, chemistry, and biology facets. The remainder of this color text focuses on applications, examining engineering aspects as well as nanomaterials and industry-specific applications in such areas as energy, electronics, and biotechnology. Also available in two course-specific volumes: *Introduction to Nanoscience* elucidates the nanoscale along with the societal impacts of nanoscience, then presents an overview of characterization and fabrication methods. The authors systematically discuss the chemistry, physics, and biology aspects of nanoscience, providing a complete picture of the challenges, opportunities, and inspirations posed by each facet before giving a brief glimpse at nanoscience in action: nanotechnology. *Fundamentals of Nanotechnology* surveys the field's broad landscape, exploring the physical basics such as nanorheology, nanofluidics, and nanomechanics as well as industrial concerns such as manufacturing, reliability, and safety. The authors then explore the vast range of nanomaterials and systematically outline devices and applications in various industrial sectors. Qualifying instructors who purchase either of these volumes (or the combined set) are given online access to a wealth of instructional materials. These include detailed lecture notes, review summaries, slides, exercises, and more. The authors provide enough material for both one- and two-semester courses.

Written with both students and educators in mind, this book presents a tour of the elements found in the British "A" level syllabus. Each chapter presents a key concept of chemistry in the context of the element, instilling a wider background in chemistry to the reader, which can then be tested by questions in the text. Students of chemistry will enjoy this informative approach to revision, while educators will gain inspiration for planning lessons and discussing concepts. International baccalaureate and foundation-year students will also benefit from the topics presented in this accessible textbook. In 2015, *The MX Book of New Sherlock Holmes Stories* burst upon the scene, featuring over sixty new traditional Sherlock Holmes adventures, all set within the correct time period, and written by many of today's leading Sherlockian authors from around the world. This first anthology, spread over three huge volumes, was the largest collection of its kind ever assembled in one place. Response was immediately and overwhelmingly positive, and there were soon calls for additional volumes. The result is this new collection, the next in an ongoing series, featuring twenty-two more Holmes investigations. Since his first appearance in print in 1887, the popularity of Sherlock Holmes has only increased. Although originally chronicled in just sixty exploits, the number of additional Holmes tales discovered since then is literally in the tens of

thousands. Along with those original narratives published by Dr. Watson's first literary agent, Sir Arthur Conan Doyle, countless other people have managed to find their way to Watson's Tin Dispatch Box in order to reveal more exciting cases featuring the Great Detective. These accounts stretch from one of Holmes's earliest cases, later recounted to Watson as they sit by the fire in the Baker Street sitting room, to an adventure just before Holmes's retirement that affects both the ancient history and the very future of England. These and all the other excellent tales contained in this volume represent some of the finest new Holmesian storytelling to be found, and honor the man described by Watson as "the best and wisest ... whom I have ever known." This anthology features contributions by: Derrick Belanger, Deanna Baran, Daniel D. Victor, Mark Mower, Craig Janacek, Jayantika Ganguly, Denis O. Smith, Matthew Booth, J.R. Campbell, Bonnie MacBird, Arthur Hall, Bob Byrne, Andrew Lane, Roger Johnson, Hugh Ashton, David Stuart Davies, Vincent W. Wright, Daniel McGachey, Nicholas Utechin, Jeremy Holstein, David Marcum, and Marcia Wilson, as well as a poem by Andrea Mantin Levy, and forewords by David Marcum, Steven Rothman, Richard Doyle, Steve Emecz, and Melissa Farnham. "This fourth volume continues the tradition set by the first three books in the series. The twenty-three items in this book include twice as many that I rate as excellent as the few I rate only as good. All the rest I rate as very good and that gives the entire volume a rating of 'excellent' as compared to any other Anthology." - Philip K Jones

Technology and increasing levels of education have exposed people to more information than ever before. These societal gains, however, have also helped fuel a surge in narcissistic and misguided intellectual egalitarianism that has crippled informed debates on any number of issues. Today, everyone knows everything: with only a quick trip through WebMD or Wikipedia, average citizens believe themselves to be on an equal intellectual footing with doctors and diplomats. All voices, even the most ridiculous, demand to be taken with equal seriousness, and any claim to the contrary is dismissed as undemocratic elitism. Tom Nichols' *The Death of Expertise* shows how this rejection of experts has occurred: the openness of the internet, the emergence of a customer satisfaction model in higher education, and the transformation of the news industry into a 24-hour entertainment machine, among other reasons. Paradoxically, the increasingly democratic dissemination of information, rather than producing an educated public, has instead created an army of ill-informed and angry citizens who denounce intellectual achievement. When ordinary citizens believe that no one knows more than anyone else, democratic institutions themselves are in danger of falling either to populism or to technocracy or, in the worst case, a combination of both. An update to the 2017 breakout hit, the paperback edition of *The Death of Expertise* provides a new foreword to cover the alarming exacerbation of these trends in the aftermath of Donald Trump's election. Judging from events on the ground since it first published, *The Death of Expertise* issues a warning about the stability and survival of modern democracy in the Information Age that is even more important today.

In *Flipping ADHD on Its Head*, Dr. Poole introduces and explores a holistic, integrated, and empowering approach to identifying and promoting the strengths of ADHD children by first flipping thinking about ADHD. Rather than framing ADHD as a disability, Dr. Proole encourages readers to

see it as a normal, if somewhat challenging, way that a brain works. Rather than "fixing" readers, Dr. Poole wants them to focus on understanding and improving their behaviors in three areas: medical, behavioral, and educational. Dr. Poole shares his own stories and those of his patients to help readers go from merely living with ADHD to thriving.

New York City welcomes Gloria Lamerino and her husband, homicide detective Matt Gennaro, in *The Oxygen Murder*, the eighth installment in Camille Minichino's acclaimed *Periodic Table Mystery* series. Gloria and her best friends, Rose and Frank Galigani, are on vacation in the Big Apple. They plan to visit Matt's niece Lori Pizzano, a documentary filmmaker, and enjoy the holiday sights together: shopping on Fifth Avenue, dining in Little Italy, and honoring ancestors at Ellis Island, while Matt attends a conference with the NYPD. Unfortunately, Lori's documentary on ozone and environmental issues has deadly fallout. Gloria stumbles over the body of Lori's scheming camerawoman in a Times Square loft, and, once again, she is thrust into some dangerous sleuthing. With suspects ranging from a disapproving brother to a smooth-talking PR administrator to a self-protecting private eye, Gloria tracks a killer through an intricate landscape of colorful neighborhoods and famous landmarks. Taking us on a trip from the city's tallest building to its grand park, from its crowded ice rinks to a lonely corner of its two-million-square-foot museum, *The Oxygen Murder* is as exciting as a ride over New York City in a helium balloon.

Enough CRC Press

*** 'An astonishing accomplishment that might be the most important book we ever read, it will change the way you look at what we eat forever.' - Dr Max Pemberton 'A wonderfully written guide for anyone who wants to eat better and save the world at the same time. Essential reading for anyone who cares about the planet.' - Thomasina Miers How changing what you eat can save the planet Our food production systems are the single biggest cause of environmental change, while diseases linked to our eating habits are at epidemic levels and increasing. *Enough*. uses the latest scientific research to address this vital question: can we provide a growing population with a healthy diet from sustainable food systems? Fortunately for us all, the answer is yes. *Enough*. shows exactly how we can tackle both of these urgent, interconnected challenges at the same time. Using a seminal piece of research published in 2019, the *Planetary Health Diet (PHD)*, Dr Coburn reveals the hidden consequences of our food choices, and how we can easily make changes which are better for

ourselves and the planet. She details which food groups we should be eating, which we should avoid - and why. Changing our way of eating is something that every one of us has the power to do. Enough. is a clear, ultimately hopeful and hugely important roadmap for both own health - and the planet's.
