Swordsmanship and Archery Springer Science & Business Media

This unique history of Japanese armed martial arts--the only comprehensive treatment of the subject in English--focuses on traditions of swordsmanship and archery from ancient times to the present. G. Cameron Hurst III provides an overview of martial arts in Japanese history and culture, then closely examines the transformation of these fighting skills into sports. He discusses the influence of the Western athletic tradition on the armed martial arts as well as the ways the martial arts have remained distinctly Japanese. During the Tokugawa era (1600-1867), swordsmanship and archery developed from fighting systems into martial arts, transformed by the powerful social forces of peace, urbanization, literacy, and professionalized instruction in art forms. Hurst investigates the changes that occurred as military skills that were no longer necessary took on new purposes: physical fitness, spiritual composure, character development, and sport. He also considers Western misperceptions of Japanese traditional martial arts and argues that, contrary to common views in the West, Zen Buddhism is associated with the martial arts in only a limited way. The author concludes by exploring the modern organization, teaching, ritual, and philosophy of archery and swordsmanship; relating these martial arts to other art forms and placing them in the broader context of Japanese culture.

The mechanical engineering curriculum in most universities includes at least one elective course on the subject of reciprocating piston engines. The majority of these courses today emphasize the application of thermodynamics to engine efficiency, performance, combustion, and emissions. There are several very good textbooks that support education in these aspects of engine development. However, in most companies engaged in engine development there are far more engineers working in the areas of design and mechanical development. University studies should include opportunities that prepare engineers desiring to work in these aspects of engine development as well. My colleagues and I have undertaken the development of a series of graduate courses in engine design and mechanical development. In doing so it becomes quickly apparent that no suitable textbook exists in support of such courses. This book was written in the hopes of beginning to address the need for an engineering-based introductory text in engine design and mechanical development. It is of necessity an overview. Its focus is limited to reciprocating-piston internal-combustion engines -- both diesel and spark-ignition engines. Emphasis is specifically on automobile engines, although much of the discussion applies to larger and smaller engines as well. A further intent of this book is to provide a concise reference volume on engine design and mechanical development processes for engineers serving the engine industry. It is intended to provide basic information and most of the chapters include recent references to guide more in-depth study.

This updated new edition provides an introduction to the field of thermoacoustics. All of the key aspects of the topic are introduced, with the goal of helping the reader to acquire both an intuitive understanding and the ability to design hardware, build it, and assess its performance. Weaving together intuition, mathematics, and experimental results, this text equips readers with the tools to bridge the fields of thermodynamics and acoustics. At the same time, it remains firmly grounded in experimental results, basing its discussions on the distillation of a body of experiments spanning several decades and countries. The book begins with detailed treatment of the fundamental physical laws that underlie thermoacoustics. It then goes on to discuss key concepts, including simple oscillations, waves, power, and efficiency. The remaining portions of the book delve into more advanced topics and address practical concerns in applications chapters on hardware and measurements. With its careful progression and end-of-chapter exercises, this book will appeal to graduate students in physics and engineering as well as researchers and practitioners in either acoustics or thermodynamics looking to explore the possibilities of thermoacoustics. This revised and expanded second edition has been updated with an eye to modern technology, including computer animations and DeltaEC examples.

Transmediality in Independent Journalism investigates mainstream journalism and its escape routes to independence through transmedia strategies. Within the scope of the latest debates in Turkey, the author argues that the function of transmediality in Turkish journalism is gradually shifting from being only a commercial entity to becoming a political system for social change, a survival mechanism for independent journalists to reach out to diverse audiences, and gain back the public trust. Bringing a fresh perspective to recent studies on cultures of transmediality along with an in-depth analysis of three contemporary Turkish cases, the book: Builds upon questions of whether transmedia storytelling can offer a support system to construct an alternative news media world in a political context such as Turkey's Examines how transmedia

storytelling can reach places the mainstream news media can't control Explores whether transmedia storytelling can sustain the survival of an independent journalist in Turkey's political context Looking beyond the case of Turkey, this study will be an important addition to the literature on rethinking journalistic form and practice, teaching transmedia strategies, and social communication. It will be of great benefit to students and scholars of journalism studies, transmedia studies, and media and communication studies. Urban Peacebuilding in Divided Societies explores the effects of urban policy and planning in the management of ethnic conflict in strife-torn societies, focusing on the cases of Belfast and Johannesburg. It combines perspectives from urban geography, political science, social psychology, and urban planning to study the relationship between ethnic ideologies and the urban strategies that affect ethnic territoriality in the form of urban land use, housing, economic development, services, and citizen involvement. The book contrasts Belfast, embedded within an uncertain shift from conflict to political settlement, with Johannesburg, engaged in post-resolution reconciliation, to analyze, along different points of societal transition, the contributions of urban policymaking to peacemaking and peacebuilding. It describes the differing rolesobstructive or facilitativethat contested cities can play amidst broader peacemaking efforts, consistent with Bollens contention that there are lessons in urban peacebuilding for constructing mutually tolerable living environments at the regional and national levels. Effectively, cities (and urban policies) are the locus for operationalizing national ideologies of ethnic coexistence. } Urban Peacebuilding in Divided Societies explores the effects of urban policy and planning in the management of ethnic conflict in strife-torn societies, focusing on the cases of Belfast and Johannesburg. In a series of convergent empirical essays, Manufacturing Whiteness explores the striking parallels in the social construction of whiteness and gender in colonial depictions of the

colonizer/colonized and in contemporary advertising. The past decade has seen a sincere, if belated, willingness among white male scholars to self-critically examine the oppressive social, cultural, and political implications of their whiteness. Building on Jacques Lacan's powerfully original social-psychoanalytic insights into the role of desire in the fetishistic constitution of the subject-in-language, *Manufacturing Whiteness* offers a sophisticated, yet accessible theoretical method for deconstructing ad-content which enables the reader to trace whiteness, "otherness," and other worldliness to the very constitution of latemodern/postmodern western identity.
