Published by Good Press. Good Press publishes a wide range of titles that encompasses every genre. From well-known classics & literary fiction and non-fiction to forgotten or yet undiscovered gems of world literature, we issue the books that need to be read. Each Good Press edition has been meticulously edited and formatted to boost readability for all e-readers and devices. Our goal is to produce eBooks that are user-friendly and accessible to everyone in a high-quality digital format.

Zoe and the Flying Hot Air Balloon Routledge

Biodiesel: A Realistic Fuel Alternative for Diesel Engines describes the production and characterization of biodiesel. The book also presents current experimental research work in the field, including techniques to reduce biodiesel's high viscosity. Researchers in renewable energy, as well as fuel engineers, will discover a myriad of new ideas and promising possibilities.

The Future Role of Dwarf Honey Bees in Natural and Agricultural Systems Routledge

Diesel engine is acknowledged for its superior efficiency and possesses a wide field of applications. It is also known as CI engine. Diesel engines also however, are the prime source of emissions such as NOX and particulate matter (PM). In order to reduce the emissions to an absolute minimum, this book explain as to how these toxins can be regulated. It is no hidden secret that the world is witnessing an oil

crisis. But with other alternative sources such as biogas, natural gas and coke based substances; diesel is not the only way forward. The unique characteristics and properties such as combustion and emission of the aforementioned alternatives are explained extensively in this book. The book also goes on to explain how one can look for early signs of wear and tear and malfunctioning components of a diesel engine and its parts.

Renoir Jones & Bartlett Learning

Nigel Calder, a diesel mechanic for more than 25 years, is also a boatbuilder, cabinetmaker, and machinist. He and his wife built their own cruising sailboat, Nada, a project they completed in 1984. Calder is author of numerous articles for Yachting Monthly and many other magazines worldwide, as well as the bestselling Boatowner's Practical and Technical Cruising Manual and Boatowner's Mechanical and Electrical Manual, both published by Adlard Coles Nautical. Here, in this goldmine of a book, is everything the reader needs to keep their diesel engine running cleanly and efficiently. It explains how diesel engines work, defines new terms, and lifts the veil of mystery that surrounds such engines. Clear and logical, this extensively illustrated guide will enable the reader to be their own diesel mechanic. As Nigel Calder says: 'there is no reason for a boatowner not to have a troublefree relationship with a diesel engine. All one needs is to set the engine up correctly in the first place, to pay attention to routine maintenance, to have the knowledge to spot early warning signs of impending trouble, and to have the ability to correct small ones before they become large ones.'

Top-Down Technicals Yale University Press

Top-Down Technicals, Macro Trading, not only builds upon the growing contributions by Arun S. Chopra, CFA, CMT to the world of market research and analysis, it outlines his process, displays his past successes, and highlights the advanced nature of his firm's work. It's a taught and highly informative discussion of the yen that also serves as the starting point for his forthcoming market observation book series. Inside Top-Down Technicals, Macro Trading, The Yen 2012, financial professionals and enthusiasts will find a detailed explanation of how they can take real-time market information to confirm macro-based trading and investment ideas. Chopra combines past editions of his monthly publication, "The Tape," with a closer look at an entire macro setup in order to create a high-level view of a macroeconomic, top-down technical cycle. The end result aids readers in expanding upon simple, long-term trading levels, and introduces new concepts of how assets trade relative to one another based on macroeconomic principles. His discussion of these long-term charts and macroeconomic relationships, as well as intermarket analysis, shows readers how to optimize the strategies and timeliness of their setups. The result: not only will you better understand Chopra's methodologies, you will also gain practical insight into the potential power of a setup on its related markets.

This book presents the papers from the Internal Combustion Engines: Performance, fuel economy and emissions held in London, UK. This popular international conference from the Institution of Mechanical Engineers provides a forum for IC engine experts looking closely at developments for personal transport applications, though many of the drivers of change apply to light and heavy duty, on and off highway, transport and other sectors. These are exciting times to be working in the IC engine field. With the move towards downsizing, advances in FIE and alternative fuels, new engine architectures and the introduction of Euro 6 in 2014, there are plenty of challenges. The aim remains to reduce both CO2 emissions and the dependence on oil-derivate fossil fuels whilst meeting the future, more stringent constraints on gaseous and particulate material emissions as set by EU, North American and Japanese regulations. How will technology developments enhance performance and shape the next generation of designs? The book introduces compression and internal combustion engines ' applications, followed by chapters on the challenges faced by alternative fuels and fuel delivery. The remaining chapters explore current improvements in combustion, pollution prevention strategies and data comparisons. presents the latest requirements and challenges for personal transport applications gives an insight into the technical advances and research going on in the

West Virginia Merchant Tokens CRC Press

This unique history of Japanese armed martial arts--the only comprehensive treatment of the subject in English--focuses on traditions of swordsmanship and archery from ancient times to the present. G. Cameron Hurst III provides an overview of martial arts in Japanese history and culture, then closely examines the transformation of these fighting skills into sports. He discusses the influence of the Western athletic tradition on the armed martial arts as well as the ways the martial arts have remained distinctly Japanese. During the Tokugawa era (1600-1867), swordsmanship and archery developed from fighting systems into martial arts, transformed by the powerful social forces of peace, urbanization, literacy, and professionalized instruction in art forms. Hurst investigates the changes that occurred as military skills that were no longer necessary took on new purposes: physical fitness, spiritual composure, character development, and sport. He also considers Western misperceptions of Japanese traditional martial arts and argues that, contrary to common views in the West, Zen Buddhism is associated with the martial arts in only a limited way. The author concludes by exploring the modern organization, teaching, ritual, and philosophy of archery and swordsmanship; relating these martial arts to other art forms and placing them in the broader context of Japanese culture.

Steve Parish Amazing Facts about Australian Insects and Spiders Elsevier In an exhibition shown from 20 January to 27 May 1996, the Kunsthalle Tübingen presented a thoughtfully prepared selection of many of Renoir's most important paintings from his more than five decades of creative life. The first comprehensive, scholarly retrospective ever devoted to the artist in Germany and presented only in Tübingen, the exhibition offered a view of a significant cross-section of the painter's complete oeuvre. Each of the works exhibited is illustrated in this volume in a full-page plate. Paintings representing the full spectrum of Renoir's themes and including some of the most noteworthy works in major international collections and museums in such cities as Washington, D.C., New York, Philadelphia, Sao Paulo, Stockholm, Madrid, London, Paris, St. Petersburg, Zurich, Tokyo, Hiroshima and Berlin - all were provided on loan for the exhibition - provide enlightening insights into the work of this artistic genius.

Hydrogen Power Good Press

Hydrogen Power: An Introduction to Hydrogen Energy and its Applications explains how hydrogen is produced, used, and handled and shows that the use of chemical hydrogen power has enormous advantages as an energy storage, transport, and use medium. Organized into seven chapters, this book first describes the chemical and physical properties of hydrogen. Subsequent chapters elucidate the current industrial uses of hydrogen, methods of producing hydrogen, and hydrogen transportation and storage. Hydrogen safety and environmental considerations are also addressed.

Standard Atlas of Muskegon County, Michigan Transportation Research Board Interior Provocations: History, Theory, and Practice of Autonomous Interiors addresses the broad cultural, historical, and theoretical implications of interiors beyond their conventionally defined architectural boundaries. With provocative contributions from leading and emerging historians, theorists, and design practitioners, the book is rooted in new scholarship that expands traditional relationships between architecture and interiors and that reflects the latest theoretical developments in the fields of interior design history and practice. This collection contains diverse case studies from the late eighteenth century to the twenty-first century including Alexander Pope ' s Memorial Garden, Design Indaba, and Robin Evans. It is an essential read for researchers, practitioners, and students of interior design at all levels.

This unique book takes silence as its central concept and questions the range of meanings and values which inform the idea as it impinges on the creative process and its content and contexts. The thematic core of silence allows a consideration of silencing and silence as opposite ends of a spectrum: one shutting down, the other enabling and opening up. As a multidisciplinary collection of essays derived from the teaching and implementation of Creative Writing at university level, the contributors consider silence as strategic, both through the need for silence and as something which compels resistance. They explore how writing has employed images and tropes of silence in the past, and used silence and gaps technically. In considering marginalised and forgotten voices, this book shows how writers bring their diverse range of backgrounds and experience to work with and against silence in Creative Writing Studies. The first theoretical work on silence in Creative Writing, this field-shifting book is an essential read for both practitioners and students of Creative Writing at the higher education level.
