Top-Down Technicals, Macro Trading, not only builds upon
the growing contributions by Arun S. Chopra, CFA, CMT to
the world of market research and analysis, it outlines his
process, displays his past successes, and highlights the
advanced nature of his firm's work. It's a taught and highly
informative discussion of the yen that also serves as the
starting point for his forthcoming market observation book
series. Inside Top-Down Technicals, Macro Trading, The
Yen 2012, financial professionals and enthusiasts will find a
detailed explanation of how they can take real-time market
information to confirm macro-based trading and investment
ideas. Chopra combines past editions of his monthly
publication, "The Tape," with a closer look at an entire
macro setup in order to create a high-level view of a
macroeconomic, top-down technical cycle. The end result
aids readers in expanding upon simple, long-term trading
levels, and introduces new concepts of how assets trade
relative to one another based on macroeconomic principles.
His discussion of these long-term charts and
macroeconomic relationships, as well as intermarket
analysis, shows readers how to optimize the strategies and
timeliness of their setups. The result: not only will you better
understand Chopra's methodologies, you will also gain
practical insight into the potential power of a setup on its
related markets.
