After 'Hit Man'
The New York
Times bestseller
Confessions of an
Economic Hit Man
documents John

Perkins' extraordinary career as a globe-trotting economic hit man. Perkins' insider's view leads him to crisis of conscience--to the realization that he must devote himself to work which will foster a world-wide awareness of the sanctity of

indigenous peoples, their cultures, and their environments. Perkins' books demonstrate how the age-old shamanic techniques of some of the world's most primitive peoples have sparked a revolution in modern concepts

about healing, the subconscious, and the powers of us has to alter individual and communal reality. This groundbreaking book is John Perkins's firsthand account of his experiences with the shamanic technique of psychonavigation--a method of traveling outside the body by means of visions and dream wanderings--and his encounters with the Shuar of the Amazon, the Quechua of the Andes, and the Bugis of Indonesia. Shuar shamans psychonavigate

for the purposes of hunting and healing, while the Bugis, among the most renowned sailors of the world, use these techniques to navigate without the aid of charts and compasses. Perkins explains how these techniques work and how the people of these indigenous cultures psychonavigate to both distant physical destinations and sources of inner wisdom. Throughout history, psychonavigation has been practiced by highly creative minds

such as Beethoven, Jung, and Einstein. Perkins's riveting narrative takes us on a journey of personal discovery as he learns the great value of these techniques and their relevance not only to individual well-being, but to the health of the environment and of the world at large. He reveals how by attuning to the positive forces in nature and communicating with our inner guides we all can become psychonavigators, finding our way to wise decisions and developing innovative

approaches to the challenges we face as individuals and a world community. Railroad Age Gazette Simon and Schuster The gnostic writings found at Nag Hammadi have stimulated much controversy about the relationship between early Christians and the diverse religious movement of the first three centuries. Perkins fills the New Testament student's need for a guide to recent developments in scholarship with a helpful survey that addresses

the origins of Gnosticism, its relationship to Judaism, Redeemer myths and New Testament hymns, and other relevant topics. Motor Industry Management Simon and Schuster Since the turn of the century, the idea that intellectual capacity is fixed has been generally accepted. But increasingly, psychologists, educators, and others have come to challenge this premise. Outsmarting IQ reveals how earlier discoveries about IQ, together with recent research, show that intelligence is not

genetically fixed. Intelligence can be taught. David Perkins, renowned for his research on thinking, learning, and education, identifies three distinct kinds of intelligence: the fixed neurological intelligence linked to IQ tests; the specialized knowledge and experience that individuals acquire over time; and reflective intelligence, the ability to become aware of one's mental habits and transcend limited patterns of thinking. Although all of these forms of intelligence function simultaneously, it is reflective

intelligence, Perkins shows, that affords the best opportunity to amplify human intellect. This is the kind of intelligence that helps us to make wise personal decisions, solve challenging technical problems, find creative ideas, and learn complex topics in mathematics, the sciences, management, and other areas. It is the kind of intelligence most needed in an increasingly competitive and complicated world. Using his own pathbreaking research at Harvard and a rich array of other sources, Perkins paints a compelling picture

of the skills and attitudes underlying learnable intelligence. He identifies typical pitfalls in multiple perspectives, and neglecting evidence. He reveals the underlying mechanisms of intelligent behavior. And he explores new frontiers in the development of intelligence in education, business, and other settings. This book will be of interest to people who have a personal or professional stake in increasing their intellectual skills, to those who look toward better education and a more thoughtful society, and not least to those who follow

today's heated debates about the nature of intelligence.

issues. The Literary Digest In a powerful debut novel that moves between the crowded streets of London and the desolate mountains of Iran, Yasmin Crowther paints a stirring portrait of a family shaken by events from decades ago and worlds away. On a rainy day in London the dark secrets and troubled past of Maryam Mazar surface violently,

with tragic consequences for her daughter, Sara, and her newly orphaned nephew. Maryam leaves her English husband and family and returns to the remote Iranian village where her story began. In a quest to piece their life back together, Sara follows her mother and finally learns the terrible price Maryam once had to pay for her
