In a powerful debut novel that moves between the crowded streets of London and the desolate mountains of Iran, Yasmin Crowther paints a stirring portrait of a family shaken by events from decades ago and worlds away. On a rainy day in London the dark secrets and troubled past

of Maryam Mazar surface violently, with tragic consequences for her daughter, Sara, and her newly orphaned nephew. Maryam leaves her English husband and family and returns to the remote Iranian village where her story began. In a quest to piece their life back together, Sara follows her mother and finally learns the terrible price Maryam once had to pay for her freedom, and of the love she left behind. Set against the breathtaking beauty of two very different places, this stunning family drama transcends culture and is, at its core, a rich and haunting narrative about mothers and daughters.

Power Farming Technical
Annual Simon and Schuster
Includes special issues.
Daily Graphic Simon and Schuster
This highly-regarded text provides a comprehensive introduction to

modern particle physics.

Extensively rewritten and updated, this 4th edition includes developments in elementary particle physics, as well as its connections with cosmology and astrophysics. As in previous editions, the balance between experiment and theory is continually emphasised. The stress is on the phenomenological approach and basic theoretical concepts rather than rigorous mathematical detail. Short descriptions are given of some of the key experiments in the field, and how they have influenced our thinking. Although most of the material is presented in the context of the Standard Model of quarks and leptons, the shortcomings of this model and new physics beyond its compass (such as supersymmetry, neutrino mass and oscillations, GUTs and superstrings) are also discussed. The text includes many problems and a detailed and annotated further reading list.

The Commercial Motor
Penguin

After 'Hit Man' The New
York Times bestseller

Confessions of an Economic
Hit Man documents John
Perkins' extraordinary
career as a globe-trotting
economic hit man. Perkins' insider's view leads him to crisis of conscience--to the realization that he must devote himself to work which will foster a world-wide awareness of the sanctity of indigenous peoples, their cultures, and their environments.

Perkins' books demonstrate how the age-old shamanic techniques of some of the world's most primitive peoples have sparked a revolution in modern concepts about healing, the subconscious, and the powers each of us has to alter individual and communal reality. Deep in the rain forests and high in the Andes of Ecuador, native shamans teach the age-old technique of dream change, a tradition that has kept the cultures of the Otavalans, Salasacans, and Shuar alive despite

centuries of conquest. Now these shamans are turning their wisdom and power to the problem of curing a new kind of illness--that created by the industrial world ' s dream of dominating and exploiting nature. John Perkins tells the story of these remarkable shamans and of the U.S. medical doctors, psychologists, and scientists who have gone with him to learn the techniques of dream change. These shamanic teachings have sparked a revolution in modern concepts about healing, the subconscious, and the powers each of us has to alter individual and communal reality.

Mechanisation

Cambridge University Press

Since the turn of the century, the idea that intellectual capacity is fixed has been

generally accepted. But increasingly, psychologists, educators, and others have come to challenge this premise.

Outsmarting IQ reveals how earlier discoveries about IQ, together with recent research, show that intelligence is not genetically fixed.

Intelligence can be taught. David Perkins, renowned for his research on thinking, learning, and education, identifies three distinct kinds of intelligence: the fixed neurological intelligence linked to IQ tests; the specialized knowledge and experience that individuals acquire over time; and reflective intelligence, the ability to become aware of

one's mental habits and transcend limited patterns of thinking. Although all of these forms of intelligence function simultaneously, it is reflective intelligence, Perkins shows, that affords the best opportunity to amplify human intellect. This is the kind of intelligence that helps us to make wise personal decisions, solve challenging technical problems, find creative ideas, and learn complex topics in mathematics, the sciences, management, and other areas. It is the kind of intelligence most needed in an increasingly competitive and complicated world.

Using his own pathbreaking research at Harvard and a rich array of other sources, Perkins paints a compelling picture of the skills and attitudes underlying learnable intelligence. He identifies typical pitfalls in multiple perspectives, and neglecting evidence. He reveals the underlying mechanisms of intelligent behavior. And he explores new frontiers in the development of intelligence in education, business, and other settings. This book will be of interest to people who have a personal or professional stake in increasing their intellectual skills, to

those who look toward better education and a more thoughtful society, and not least to those who follow today's heated debates about the nature of intelligence.

After 'Hit Man' The New York Times bestseller

Confessions of an Economic Hit Man

documents John Perkins' extraordinary career as a globe-trotting economic hit man. Perkins' insider's view leads him to crisis of conscience--to the realization that he must devote himself to work which will foster a world-wide awareness of the sanctity of indigenous peoples, their cultures, and their environments.

Perkins' books demonstrate how the age-old shamanic techniques of some of the world's most

primitive peoples have sparked a revolution in modern concepts about healing, the subconscious, and the powers each of us has to alter individual and communal reality. This groundbreaking book is John Perkins' firsthand account of his experiences with the shamanic technique of psychonavigation--a method of traveling outside the body by means of visions and dream wanderings--and his encounters with the Shuar of the Amazon, the Quechua of the Andes, and the Bugis of Indonesia. Shuar shamans psychonavigate for the purposes of hunting and healing, while the Bugis, among the most renowned sailors of the world, use these techniques to navigate without the aid of charts and compasses. Perkins explains how these techniques work and how the people of these indigenous cultures

psychonavigate to both distant physical destinations and sources of inner wisdom. Throughout history, psychonavigation has been practiced by highly creative minds such as Beethoven, Jung, and Einstein. Perkins ' s riveting narrative takes us on a journey of personal discovery as he learns the great value of these techniques and their relevance not only to individual well-being, but to the health of the environment and of the world at large. He reveals how by attuning to the positive forces in nature and communicating with our inner guides we all can become psychonavigators, finding our way to wise decisions and developing innovative approaches to the challenges we face as individuals and a world community.

Shipbuilding and Shipping Record

The gnostic writings found

at Nag Hammadi have stimulated much controversy about the relationship between early Christians and the diverse religious movement of the first three centuries. Perkins fills the New Testament student's need for a guide to recent developments in scholarship with a helpful survey that addresses the origins of Gnosticism, its relationship to Judaism, Redeemer myths and New Testament hymns, and other relevant topics.
