Peterbilt's fan strategy takes 12 volts to the solenoid to turn the fan on. So Pete installs a normally closed relay to the fan control valve. This way when the

ECM send out power, it opens the relay. The relay is normally located on the fire wall of the truck. There are a couple of things I would check. First would be the AC pressure switch.

Peterbilt Engine Fan Relay - dbns peechtherapy .co.za
The reason Peterbilt uses a relay is because Peter uses the : "Power to energise" fan

strategy. Which means it should take power to energise the fan solenoid. However, Cat's fan strategy is "Power out is fan off". Take a look at this schematic. I would follow the wires from the fan control solenoid and it should lead you to the relay.
