Peterbilt's fan strategy takes 12 volts to the solenoid to turn the fan on. So Pete installs a normally closed relay to the fan control valve. This way when the ECM send out power, it opens the relay. The relay is normally located on the fire wall of the truck.

Thanks for the

information. It sounds like your fan control

relay is sticking. Peter bilt uses a

relay to control the fan. The engine ecm

decides to engage the fan but when the ecm

decides to cut the fan off, the relay

sticks and stays on. When you remove the

fuse, the relay looses all power and

cuts off. Please let me know if you need

more help or have more questions.

Symptoms of a Bad or Failing Cooling Fan Relay ...

The cooling fan relay is the relay that controls the

engine ' s cooling fans. When the correct

parameters are met, a temperature switch or the

computer will activate the relay, which will allow

power to the fans. The relay will usually be

activated once it is detected that the vehicle ' s

temperature approaches excessively high

temperatures. *Peterbilt Engine Fan Relay*

The function of the cooling fan relay is to convert a low voltage signal from either the electronic control module (ECM) or a thermostatically controlled sensor. The cooling fan relay takes the low voltage signal and internally switches the relay to allow battery voltage to be supplied to the radiator cooling fan.

The reason Peterbilt uses a relay is because Peter uses the "Power to energise" fan strategy. Which means it

should take power to energise the fan solenoid. However, Cat's fan strategy is "Power out is fan off". Take a look at this schematic. I would follow the wires from the fan control solenoid and it should lead you to the relay. The relay is normally inside the frame rail.

The reason I ask is because if
it take power to engage the
fan, the truck will have a fan
relay that pin 11 connects to.
It's a normally closed relay and
when pin 11 is sending power,
it opens it. If you have this set
up, I would suspect the relay
that feeds the fan solenoid is
faulty. I see this a lot on
Peterbilts.
