Lng Markets in Transition SAGE Publications India

Driven by an increasing recognition of the many advantages of natural gas and by the need to diversify its coal-dominated energy supply, China's natural gas industry is poised for rapid expansion. Some major gas infrastructure projects have been launched to support ambitious gas growth targets in the country for the next five years and beyond. Other countries within the IEA and outside, have faced similar challenges in developing their gas markets, but the challenges faced by China are far greater. Chinese gas reserves are relatively limited and are located far from the main centres of demand; cheap alternatives are available; there is a lack of related technology and skill; and knowledge of how best to develop markets is not widespread. This report attempts to address these challenges.

Organization for Economic

National Oil Companies (NOCs) directly or indirectly control the majority of oil and gas reserves. As such, they are of great consequence to their country's economy, to importing countries' energy security, and to the stability of oil and gas markets. The paper analyzes the available evidence on the objectives, governance and performance of 20 NOCs from both net importing and net exporting countries, and draws conclusions about the design of policies and measures that are more likely to lead to social value creation. NOCs differ from private companies on a number of very important variables, including the level of competition in the market in which they operate, their business profile along the sector value chain, and their degree of commercial orientation and internationalization. Most share some core characteristics: they are usually tied to the 'national purpose' and serve political and economic goals other than maximizing the firm's profits. This paper introduces a conceptual model to analyze value creation by NOCs that takes into consideration their complex objective function. Our analysis aims to answer the following questions: Are certain corporate governance arrangements more suited than others to promote value creation? Is good geology a pre-condition for NOC value creation? Are there benefits

from exposing the NOC to competition from private oil companies? Does the development of forward and backward linkages hamper NOC value creation?

Global Energy Governance Springer

This book presents an enquiry into the interface between nature, economy and society, which is still in its early stages, notwithstanding the commendable progress and advances made in the field of environmental and natural resource economics within the ever-expanding boundaries of economics as a discipline. It further delineates the evolution of an inter-disciplinary framework for

analyzing the status, the future goals, mechanisms and policy instruments that can help move towards a more ecologically sustainable, economically beneficial and socially just future. A pre-requisite for preparing a comprehensive and coherent framework involves unfolding the multiple layers of interconnectedness between the three systems nature, economy and society, each of which has its own internal consistencies as well as externalities. Against this backdrop, the book presents scholarly contributions that focus on four broadly defined building blocks, namely: i) accounting for ecosystems services for life and human well-being; ii) impacts of economic growth on ecosystems; iii) social norms, equity, and governance; and iv) alternative approaches to green and socio-economic systems. The analyses, presented by some of the most eminent national and international scholars, address the major environmental challenges that nations around the world face today and consider which specific policy directions at the international and national level are needed. In particular, the choices India and South Asia now face, as development and environment both need to be addressed adequately, touch on many of these challenges.

supply from Russia, the Caspian region and other current and prospective producer countries through Turkey and other transit routes (including LNG) and assesses costs of supply and gasification prospects in nine gas markets in the South East Europe region: Albania Bosnia and Herzegovina Bulgaria Croatia Kosovo Macedonia Montenegro Romania Serbia These markets are all signatories of the Athens Memoranda of 2002 and 2003, which commit the participants to regional cooperation in electricity and gas.

Understanding the Global Energy Crisis World Bank Publications

We are facing a global energy crisis caused by world population growth, an escalating increase in demand, and continued dependence on fossil-based fuels for generation. It is widely accepted that increases in greenhouse gas concentration levels, if not reversed, will result in major changes to world climate with consequential effects on our society and economy. This is just the kind of intractable problem that Purdue University's Global Policy Research Institute seeks to address in the Purdue Studies in Public Policy series by promoting the engagement between policy makers and experts in fields such as engineering and technology. Major steps forward in the development and use of technology are required. In order to achieve solutions of the required scale and magnitude within a limited timeline, it is essential that engineers be not only technologically-adept but also aware of the wider social and political issues that policy-makers face. Likewise, it is also imperative that policy makers liaise closely with the academic community in order to realize advances. This book is designed to bridge the gap between these two groups, with a particular emphasis on educating the socially-conscious engineers and technologists of the future. In this accessibly-written volume, central issues in global energy are discussed through interdisciplinary dialogue between experts from both North America and Europe. The first section provides an overview of the nature of the global energy crisis approached from historical, political, and sociocultural perspectives. In the second section, expert contributors outline the technology and policy issues facing the development of major conventional and renewable energy sources. The third and final section explores policy and technology challenges and opportunities in the distribution and consumption of energy, in sectors such as transportation and the built environment. The book's epilogue suggests some future scenarios in energy distribution and use.

When natural gas was first discovered in Appalachia in the 19th century, its development as a fuel was rapid. Unlike oil and coal, gas could be moved only by pipeline and required large containers for storage. It was not possible to cope with peak loads without adding excessive pipeline capacity until just before World War II, when two sister gas companies developed a plant to liquefy and store natural gas as a liquid; the liquid was then regasified to deal with peak loads. The liquid is 1/600 the volume of the gas, but it requires storage at an extremely low temperature, 1-260 ° F. This worked well until 1944, when a liquid natural gas (LNG) tank in Cleveland ruptured and caused a fire with 130 fatalities. The fire did not end the industry but caused it to pause. Over the next few years the problems in materials, design, standards, and siting were solved. The recognition that liquefaction made LNG transportable without a pipeline was the breakthrough. In 1959 a shipload of LNG went from Louisiana to Britain and restarted the LNG industry. It is now a major worldwide energy industry and the topic of this work.

Twelfth Five Year Plan (2012 - 2017) OUP Oxford

A clear-eyed look at modern India's role in Asia's and the broader world One of India's most distinguished foreign policy thinkers addresses the many questions facing India as it seeks to find its way in the increasingly complex world of Asian geopolitics. A former Indian foreign secretary and national security adviser, Shivshankar Menon traces India's approach to the shifting regional landscape since its independence in 1947. From its leading role in the "nonaligned" movement during the cold war to its current status as a perceived counterweight to China, India often has been an after-thought for global leaders—until they realize how much they needed it. Examining India's own policy choices throughout its history, Menon focuses in particular on India's responses to the rise of China, as well as other regional powers. Menon also looks to the future and analyzes how India's policies are likely to evolve in response to current and new challenges. As India grows economically and gains new stature across the globe, both its domestic preoccupations and international choices become more significant. India itself will become more affected by what happens in the world around it. Menon makes a powerful geopolitical case for an India increasingly and positively engaged in Asia and the broader world in pursuit of a pluralistic, open, and

inclusive world order.

This book provides a comprehensive overview of Corporate Social Responsibility (CSR) in Indian corporations following the 2013 legal mandate on corporate spending of profits for CSR. Bringing together authors hailing from diverse walks of life, the book pursues a 'hands-on' approach, with real-world case studies and examples that help the reader feel the dynamic pulse of India immediately after the ratification of the CSR mandate in the Companies Act, 2013. The Act is expected to affect over 16,300 companies with an estimated flow of approximately 200 billion Indian rupees into the economy every year, thus shaking the foundations of business and society and impacting the country at multiple stakeholder levels. As a result, India is likely to become the birthplace of social, economic, and environmental transformation through financial investments in CSR! In order to insightfully reflect on this transition, this book has been divided into three parts. The first part presents the CSR mandate and its implications, while the second focuses on its implementation and the third part provides a view on the way forward. The book helps to reveal the various layers of CSR in an emerging economy like India and is expected to spark debate, discussion and research among policy-makers, consultants, academics, practitioners and other stakeholders the world over, which will further expand its contribution to CSR literature and open up new vistas in CSR research. "This is indeed a first of its kind book and marks a watershed in the journey of CSR. It is an extremely important contribution to the body of knowledge in the area of CSR and Corporate Governance in emerging economies that is driven by a completely different set of challenges, opportunities and requirements from that of developed economies." Dr. Bhaskar Chatterjee, Director General & CEO, Indian Institute of Corporate Affairs
