This book describes lessons learned from the implementation of research based learning at Maastricht University. Well-known for its problem based learning (PBL) educational model, Maastricht University implemented research-based learning (RBL) as a new educational concept in addition to PBL, around 2009. The model has taken the shape of an excellence programme offering third-year bachelor students an opportunity to conduct academic research together with academic staff. The introduction of the research-based learning concept into the programmes of all Maastricht University's faculties has resulted in a range of RBL models that vary to fit the various disciplines and programmes offered by the faculties. The book first presents

theoretical models and a description of the concepts of research-based learning and undergraduate research (UGR). Next, by means of case studies, it describes the formulas developed to suit the various programmes, the challenges encountered, the initial reservations on the part of the staff, the limitations caused by regulations and demands of the curricula, as well as the successes and results of the excellence programme. The disciplines described in the case studies include psychology and neuroscience, knowledge engineering, social and cultural sciences, law, and business and economics.

Balkans. And the secret-killing machine continues to evolve beyond WikiLeaks, as a movement of hacktivists aims to obliterate the world's institutional secrecy. Strategic Information Management Wiley-Blackwell Acceptance is a comic chronicle of a year in the life in the college admissions cycle, and the frantic rush of students and parents to do anything to distinguish themselves. For all, the price of admission requires compromise; for a few, the ordeal blossoms into an unexpected journey of discovery.
This Machine Kills Secrets Prentice Hall There has been an explosion of Web-based courses in higher education. Aiming at an interdisciplinary audience, the contributors draw upon diverse philosophical and empirical backgrounds to make claims about Web-based pedagogy. Among the points they raise is the concern that education is

more easily commodified through Internet technologies, implying that traditional faculty roles in teaching (and research) are at risk. Moreover, current understandings of what it means to be a teacher or a student are undergoing redefinition as a result of these new distance-learning technologies. The contributors note that Web-based pedagogy is associated with sound instruction when particular strategies are adopted. As a corollary, this form of teaching is least effective when attempts are made to directly translate traditional styles of teaching. Political, social, and economic interests are competing to shape the direction that online education will take. The authors argue that opportunities exist for administrators and faculty to define the terms under which Web-based learning will occur in their institutions.

cyberweapons, hack sports cars and develop ransomware capable of stopping international banks in their tracks. Kingdom of Lies is a fast-paced look at technological innovations that were mere fantasy only a few years ago, but now make up an integral part of all our lives. **Practical Finite Element Analysis** Cambridge University Press A former Secretary of Homeland Security examines our outdated laws regarding the protection of personal information, and the pressing need for change. Nothing undermines our freedom more than losing control of information about ourselves. And yet, as daily events underscore, we are ever more vulnerable to cyber-attack. In this bracing book, Michael Chertoff makes clear that our laws and policies surrounding the protection of personal information, written for an earlier time, are long overdue for a complete overhaul. On the one hand, the collection of data—more widespread by business than by government, and impossible to stop—should be facilitated as an ultimate protection for society. On the other, standards under which information can be inspected, analyzed, or used must be significantly tightened. In offering his

compelling call for action, Chertoff argues that what is at stake is not so much the simple loss of privacy, which is almost impossible to protect, but of individual autonomy—the ability to make personal choices free of manipulation or coercion. Offering vivid stories over many decades that illuminate the three periods of data gathering we have experienced, Chertoff explains the complex legalities surrounding issues of data collection and dissemination today, and charts a path that balances the needs of government, business, and individuals alike. "Surveys the brave new world of data collection and analysis…The world of data as illuminated here would have scared George Orwell."?Kirkus Reviews "Chertoff has a unique perspective on data security and its implications for citizen rights as he looks at the history of and changes in privacy laws since the founding of the U.S."—Booklist Google's PageRank and Beyond Atlantic Monthly Press Grobler and Wärnich's market-leading text has long been regarded as the most comprehensive and user-friendly book available for those studying Human Resource Management in South Africa. Kabbani was a poet of great simplicity - direct, spontaneous, musical, using the language of everyday life. He was a ceasless campaigner for women's rights, and his verses praise the beauty of the female body, and of love. He was an Arab nationalist, yet he criticized Arab dictators and the lack of freedom in the Arab world.
