The unforgettable, haunting story of a young woman's perilous fight for freedom and justice for her brother, the first novel published in English by a female Kurdish writer Set primarily in Iran, this extraordinary debut novel weaves 50 years of modern Kurdish history through a story of a family facing oppression and injustices all too familiar to the Kurds. Leila dreams of making films to bring the suppressed stories of her people onto the global stage, but obstacles keep piling up. Her younger brother, Chia, influenced by their father's past torture, imprisonment, and his deep-seated desire for justice, begins to engage with social and political affairs. But his activism grows increasingly risky and one day he disappears in Tehran. Seeking answers about her brother's whereabouts, Leila fears the worst and begins a campaign to save him. But when she publishes Chia's writings online, she finds herself in grave danger as well. Inspired by the life of Kurdish human rights activist Farzad Kamangar and published to coincide with the 10th anniversary of his execution, *Daughters of Smoke and Fire* is an evocative portrait of the lives and stakes faced by 40 million stateless Kurds. It's an unflinching but compassionate and powerful story that brilliantly illuminates the meaning of identity and the complex bonds of family. A landmark novel for our troubled world, *Daughters of Smoke and Fire* is a gripping and important read, perfect for fans of Khaled Hosseini's *The Kite Runner* and Chimamanda Ngozi Adichie's *Half of a Yellow Sun*.

This work is a comprehensive collection of cutting-edge scholarship on the economic, international business, political, legal, and environmental ramifications of globalization—one of the hottest topics of the day. International trade is as old as nations. During the last five decades, however, advances in technology and transportation have changed the scope and method of international trade. Disputes rage about the effects of these changes; advocates for different positions offer argument, but little factual or theoretical analysis. Globalization offers all the information readers need to sort out the arguments. Written with the highest degree of scholarship, intended for college students or working professionals, the encyclopedia provides both introductory material to broad economic, legal, political, and environmental theory, and in-depth analysis of how theory interacts with practice in the framework of global trade. A trader in New York can, in a matter of seconds, execute a billion-dollar currency transaction in Hong Kong. What does this transaction mean to New Yorkers, to residents of Hong Kong, and to the rest of the world? This book gives readers the tools to answer those questions.

“ Equal parts critical manifesto and tender mini-memoir about a boy and his bikes ” from Eben Weiss, blogger and author of *The Enlightened Cyclist (GQ)*. Cycling is exploding in a good way. Urbanites everywhere, from ironic hipsters to earth-conscious commuters, are taking to the bike like aquatic mammals to water. BikeSnobNYC—cycling's most prolific, well-known, hilarious,

and anonymous blogger—brings a fresh and humorous perspective to the most important vehicle to hit personal transportation since the horse. Bike Snob treats readers to a laugh-out-loud rant and rave about the world of bikes and their riders and offers a unique look at the ins and outs of cycling, from its history and hallmarks to its wide range of bizarre practitioners. Throughout, the author lampoons the missteps, pretensions, and absurdities of bike culture while maintaining a contagious enthusiasm for cycling itself. Bike Snob is an essential volume for anyone who knows, is, or wants to become a cyclist. “ This is a social manual that should be bundled with every bike shipped in America. ” —Christian Lander, author of *Stuff White People Like* “ I like to think I know a thing or two (or three) about being ruthless and relentless—either trying to win the Tour or fighting cancer. The Snob knows it too. Keeping us dorks in line is tough work. I take pleasure in getting picked on by the Snob, slightly more pleasure in reading his writing, but take the most pleasure punishing his ass (my payback) on the bike either in Central Park or on 9W/River Road. Long live the Snob. ” —Lance Armstrong

When the San Jos é mine collapsed outside of Copiap ó , Chile, in August 2010, it trapped thirty-three miners beneath thousands of feet of rock for a record-breaking sixty-nine days. After the disaster, Pulitzer Prize-winning journalist Hé ctor Tobar received exclusive access to the miners and their tales, and in *The 33*, he brings them to haunting, visceral life. We learn what it was like to be imprisoned inside a mountain, understand the horror of being slowly consumed by hunger, and experience the awe of working in such a place—underground passages filled with danger and that often felt alive. A masterwork of narrative journalism and a stirring testament to the power of the human spirit, *The 33* captures the profound ways in which the lives of the Chilean miners and everyone involved in the catastrophe were forever changed.

A Clear Outline of Current Methods for Designing and Implementing Automotive Systems Highlighting requirements, technologies, and business models, the *Automotive Embedded Systems Handbook* provides a comprehensive overview of existing and future automotive electronic systems. It presents state-of-the-art methodological and technical solutions in the areas of in-vehicle architectures, multipartner development processes, software engineering methods, embedded communications, and safety and dependability assessment. Divided into four parts, the book begins with an introduction to the design constraints of automotive-embedded systems. It also examines AUTOSAR as the emerging de facto standard and looks at how key technologies, such as sensors and wireless networks, will facilitate the conception of partially and fully autonomous vehicles. The next section focuses on networks and protocols, including CAN, LIN, FlexRay, and TTCAN. The third part explores the design processes of electronic embedded systems, along with new design methodologies, such as the virtual platform. The final section presents validation and verification techniques relating to safety issues. Providing domain-specific solutions to various technical challenges, this handbook serves as a reliable, complete, and well-documented source of information on automotive embedded systems.

This book examines the visions, fantasies, frames, discourses, imaginaries, and expectations associated with six state-of-the-art energy systems—nuclear power, hydrogen fuel cells, shale gas, clean coal, smart meters, and electric vehicles—playing a key role in current deliberations about low-carbon energy supply and use. *Visions of Energy Futures: Imagining and Innovating Low-Carbon Transitions* unveils what the future of energy systems could look like, and how their meanings are produced, often alongside moments of contestation. Theoretically, it analyzes these technological case studies with emerging concepts from various disciplines: utopianism (history of technology), symbolic convergence (communication studies), technological frames (social construction of technology), discursive coalitions (discourse analysis and linguistics), sociotechnical imaginaries (science and technology studies), and the sociology of expectations (innovation studies, future studies). It draws from these cases to create a synthetic set of dichotomies and frameworks for energy futures based on original data collected across two global epistemic communities— nuclear physicists and hydrogen engineers—and experts in Eastern Europe and the Nordic region, stakeholders in South Africa, and newspapers in the United Kingdom. This book is motivated by the premise that tackling climate change via low-carbon energy systems and practices is one of the most significant challenges of the twenty-first century, and that success will require not only new energy technologies, but also new ways of understanding language, visions, and discursive politics. The discursive creation of the energy systems of tomorrow are propagated in polity, hoping to be

realized as the material fact of the future, but processed in conflicting ways with underlying tensions as to how contemporary societies ought to be ordered. This book will be essential reading for students and scholars of energy policy, energy and environment, and technology assessment.

Globalization [2 volumes] Haynes Publishing

Packed with cultural, company, and country examples, this book offers a mix of theory and practical applications covering globalization, global branding strategies, classification models of culture, and the consequences of culture for all aspects of marketing communications. The author helps define cross cultural segments to better target consumers across cultures and features content on how culture affects strategic issues, such as the company's mission statement, brand positioning strategy, and marketing communications strategy. It also demonstrates the centrality of value paradoxes to cross cultural marketing communications, and uses the Hofstede model to help readers see how their understanding of cultural relationships in one country/region can be extended to other countries/regions. Updates to the new edition include: Up-to-date research on new topics, including: culture and the media, culture and the Internet, and a more profound comparison of the different cultural models. More examples from major regions and countries from around the world Broader background theory on usage differences of new digital media and extensive coverage of consumer behaviour A range of online instructor resources complement the book, including chapter-specific PowerPoint slides, downloadable advertising images from the book, chapter-specific questions and key points, and video examples of advertising from around the world.

The Peugeot 205 T16 is the legendary Group B turbocharged four-wheel-drive rally car produced by Peugeot between 1984 and 1986. Between 1984 and 1986, 205 T16s won 16 World Championship rallies in the hands of Ari Vatanen, Timo Salonen, Juha Kankkunen and Bruno Saby, and lifted both the manufacturers' and drivers' titles in 1985 and 1986 in the hands of Timon Salonen and Juha Kankkunen, respectively, against strong opposition from Audi, Lancia, Ford and Austin-Rover. The car was used to extraordinary effect by Peugeot as a marketing tool for the 205 road car, and the project lifted Peugeot to become a mainstream manufacturer to rival the established brands worldwide. The original 205 T16 appeared on the rally stages in 1984, while the revised 'E2' was introduced partway through 1985. The 'E2' incorporated various revisions raising power output to 550bhp. After the cancellation of Group B at the end of 1986, Peugeot modified three 205 T16 cars to compete in the famous Pikes Peak Hillclimb, and later cars were modified to compete in the Paris-Dakar rally, winning in 1987 and 1988. The car also formed the basis of the '405 T16', which won the Paris-Dakar for Peugeot in 1989 and 1990. Today, the appearance of 205 T16s is always eagerly anticipated at historic rally events, and motorsport retrospectives such as the Goodwood Festival of Speed. Peugeot 205 T16 Group B Rally Car Enthusiast's Manual chronicles the design, anatomy and operation of the 205 T16, with input from many of the drivers and engineers involved.
