Have you got something to complain about? Have you been short changed? Have you complained and got nothing but hollow apologies? Are you due compensation? Then this book could help. With eight years experience in a customer management role for a multi-national retailer, Peter realised that it was the light-hearted, entertaining letters that received the most satisfactory resolutions. 'I want to complain' explains exactly what life is like on the other end of the call-centre telephone. The second section of the book contains a collection of genuine complaint letters along with their replies so you can see for yourself just how it works. Those companies written to include Marks and Spencer, Tesco, Asda and even Newcastle city council to get a parking ticket revoked - all with positive resolutions. 'I want to complain' hopes to put the 'fun' into refund and the 'jest' into goodwill gesture as it takes you on an

entertaining and humorous journey into the world of customer services.

Business failure is not limited to start ups. Industry Watch (published by BDO Stoy Hayward, an accounting firm) 'predicts that 17,043 businesses will fail (in the UK) in 2006, a further 4 per cent increase from 2005'. In America between 1990 and 2000, there were over 6.3 million business start-ups and over 5.7 million business shut-downs. Risk of failure can be greatly reduced through effective organizational design that encourages high performance and adaptability to changing circumstances. Organization design is a straightforward business process but curiously managers rarely talk about it and even more rarely take steps to consciously design or redesign their business for success. This new Economist guide explores the five principles of effective organization design, which are that it must be: driven by the business strategy and the operating context (not by a new IT system, a new leader wanting to make an impact, or some other non-business reason). involve holistic thinking about the organization be for the future rather than for now not to be undertaken lightly - it is resource intensive even when going well be seen as a fundamental process not a repair job. (Racing cars are designed and built. They are then kept in good repair.)
