Peugeot 406 specs, size dimensions, fuel consumption

The PSA EW/DW engine is a family of straight-4 petrol and diesel engines manufactured by the PSA Group for use in their Peugeot and Citroën automobiles. The EW/DW family was introduced in 1998 as a replacement for the XU engine. The EW/DW uses many parts from the XU, most notably the crankshaft, but is built with lighter materials. The EW name is used for the petrol engines ("e" for essence ...

[Review: Peugeot 406 \(1996-04\) - AustralianCarReviews](#)

In 1999 when the D9 version of the 406 Coupe was introduced Peugeot became somewhat schizophrenic about

their 4 cylinder engine offering in the car. Ideally they wanted to offer an improved engine in the 160 bhp range to give the non-V6 models a performance comparable with competing 2+2 coupes but they did not have a suitable automatic transmission to marry with the preferred 2.2 litre EW12J4 engine that they chose.

The phase 1 406 V6 , D8, had the ES9J4, while the phase 2 (D9) had the ES94S which was the V6 engine that 607 had. The D8 V6 develops maximum of 190 hp at 5,500 rpm. While the D9 V6 engine develops 210 hp at 6000 rpm, with maximum torque of 285 Nm at 4000 rpm.
