Our resource focuses on recognizing how climate change and human activities are affecting their delicate balances. Become an ecologist and list factors in an aquatic ecosystem as biotic or abiotic. Visit an aquatic ecosystem near your home and learn as much as you can through careful observations. Find out why some aquatic organisms have a hard time

adapting to climate change. Explore the effects of human activity on aquatic ecosystems. Spend some time at your local aquarium to be a part of the aquatic ecosystem. Get a sense of what's to come as you look at the rate of extinction of marine species. Find out what we can do to restore aquatic dead zones. Written to Bloom's Taxonomy and STEAM initiatives, additional hands-on activities, graphic organizers, crossword, word search, comprehension quiz and answer key are also

included. Ecological Effects of Acid Deposition Cambridge University Press This book presents comprehensive results from case studies of five innovations in science education that have much to offer toward understanding current reforms in this field. Each chapter tells the story of a case in rich detail, with extensive documentation, and in the voices of many of the participants- the innovators, the teachers, the students. Similarly, Volume 3 of Bold Ventures presents the results from case studies of five innovations in mathematics education. Volume 1 provides a cross-case analysis of all eight innovations. Many

U.S. readers certainly will be very familiar with the name of at least one if not all of the science innovations discussed in this volume-for example, Project 2061- and probably with their general substance. Much of the education community's familiarity with these projects' own dissemination efforts. The research reported in this volume, however, is one of the few detailed studies of these innovations undertaken by researchers outside the projects themselves. Each of the five studies was a large-scale effort involving teams of researchers over three years. These teams analyzed many documents, attended numerous

critical project meetings, visited multiple sites, conducted dozens of individual interviews. The team leaders (Atkin, Huberman, Rowe), having spent much time with science education over long careers, looked at these innovations through many lenses. It was a daunting task for each team to sift through the mountains of detail in order to bring the most compelling themes to the surface.

resource book for
Italian lower
secondary school
teachers who are
interested in doing
CLIL projects. This
photocopiable book
plus audio CD will
be very useful for
those schools which

allocate extra teaching hours for English as part of the new Italian 'riforma'. • Many of the activities will help students with the oral part of the Italian State exam at the end of the 'Scuola Superiore di Primo Grado'. (12-14 year olds). • It contains a variety of texts and text-tasks for mixed-ability classes. • Each project can be assessed so that students can include their results in their language Portfolio. • The projects can be used as stand-alone. They do not need the support of any core English course. • They can be taught in a variety of classes. •

The themes deal with 'convivenza civile' (social, moral, cultural development issues) in compliance with the new Italian 'riforma'. • The book contains 5 projects divided into themes: 1. How green are you? 2. Keep it safe 3. Forces of Nature 4. Citizens of the world 5. A look at the past
