Now in its second edition, this highly successful guide to safe prescribing of the most common classes of drugs is your starting point for safe and effective practice. The first edition was a direct response to requests from students for a compendium of the 100 most important drugs in the NHS. Research led by Professor Emma Baker identified the 'top

100 drugs' by their importance and prescribing frequency. The top 100 drugs and the five most important intravenous fluids are presented using a clear, consistent layout across double-page spreads. Drugs are arranged alphabetically and also listed by organ system and clinical indication, providing multiple pathways into the information. Clinical pharmacology is discussed under the headings: common indications; mechanisms of action; important adverse effects; warnings; and important interactions. Practical prescribing is discussed under the headings: prescription; administration;

communication; monitoring; and cost. A clinical tip is presented for every drug. Single-best-answer questions are provided for self-assessment and to show how information from several drugs may be integrated.

This accessible and comprehensive book provides the thorough understanding of this discipline that will be needed for practising pharmacists and students to develop into effective public health practitioners. The role of pharmacists in improving the general health of the public is developing rapidly, directed by changes to health policy in the UK and elsewhere. Often the focus of the pharmacist is necessarily on individual patients, but the importance of pharmacy practice in population health should not be underestimated. Pharmacy in Public Health focuses on the

---

important topics in public health relevant to all pharmacists. Case studies are used throughout the text to illustrate how public health initiatives can be implemented in different pharmacy sectors. Specific key concepts are outlined, including: determinants of health; pharmacy within public health: UK and international perspective; needs assessment and public involvement; evidence-based delivery; risks and benefits; health education opportunities; health protection; developing pharmacy services and preventing disease; medicines management.
