This straightforward guide to taking patient history comprehensively covers all of the commonly seen OSCE scenarios within the current undergraduate medical curriculum. The Easy Guide to Focused History

Taking for OSCEs includes introductory chapters with general OSCE guidance, mapping onto the Calgary-Cambridge model. These include tips from recently qualified doctors and highly respected physicians and surgeons who commonly examine OSCEs, as well as a sample OSCE marking scheme. The book then covers 56 histories based on presenting complaints - more than any other text on the market - thoroughly testing both knowledge and examination

technique. Each history is based around the exam requirements, with mnemonics, 'red flag' symptom boxes and list-based breakdowns to aid prompt recall. Common and serious differentials are highlighted, as well as investigations to help rule out the serious conditions. Each section concludes by outlining key aspects for each differential diagnosis as well as a list of investigations and management options. With this book, every student will be well

equipped to tackle any clinical problem, in the OSCE examination and also in their continued professional practice.

Now in its fourth edition, this best-selling book is fully updated to

address the ever increasing demands on healthcare professionals to deliver high-quality patient care. A multitude of factors impinge on healthcare delivery today, including an ageing population, more sophisticated medicines, high patient expectation and changing health service infrastructure. Time demands on primary care doctors have caused other models of service delivery

to be adopted across the world, leading to ongoing changes in the traditional boundaries of care between doctors, nurses, and pharmacists. Certain medical tasks are now being performed by nurses and pharmacists, for example prescribing. Healthcare policies to encourage patients to manage their own health have led to more medicines becoming available over the counter, allowing

community pharmacists to manage and treat a wide range of conditions. Further deregulation of medicines to treat acute illness from different therapeutic areas seems likely. Government policy now encourages chronic disease management as a self-care activity, and could well be the largest area for future growth of reclassification of medicines. Pharmacists, now more than

ever before, need to be able to recognise the signs and symptoms, and use an evidence-based approach to treatment. Community Pharmacy is intended for all non-medical prescribers but especially for pharmacists, from undergraduate students to experienced practitioners.
