Increasingly, modern medicine relies on so called traditional or ancient medical knowledge. Holistic practices such as adhering to proper diet, observing rules for appropriate behavior, and administering medical preparations are coupled with the latest technology and methods to treat the whole patient. In light of this trend, there is much to be gained from understanding of one of the oldest medical systems still in existence. Tibetan Medicinal Plants provides you a detailed analysis of how Tibetan plants are used in this centuries old system. The book opens with a summary of Tibetan medicine and covers the various habitats in which the plants are found. The main part of this volume encompasses 60 monographs listed by the Tibetan plant name. Each monograph consists of several chapters addressing different topics related either to the Tibetan or the Western approach. Most of the monographs contain a description of the macroscopic and microscopic characteristics of the used plant parts, and anatomical features of 76 plants are provided. Each monograph presents an overview of the known chemical constituents and pharmacological properties of each plant and describes their use in Tibetan medicine. In contrast to other publications on Tibetan medicine, where translations of the Tibetan terms are given in other languages, this

book treats the Tibetan word as a technical term, keeps the Tibetan term and explains its meaning, lessening confusion by reducing the number of translations. Traditional Tibetan medicine has been in existence for centuries. Curative practices existed in the prebuddhist era, and the art of healing developed more than 2500 years ago. Tibetan Medicinal Plants provides a comprehensive overview of all plant types, thus making it easier to grasp the Tibetan concept. It gives you a comprehensive look at this centuries old science.

"In this chapter, we introduce the idea of a new framework for research. Within our writing, we define our framework as a model for practice that can be used by people within the organization: these could be leaders, colleagues, researcher-practitioners, and evaluators to improve practice and solve problems in context. The book is about providing support for the thousands of people in organizations who are tasked with finding and solving problems, whether they are formal internal evaluators or not. Our book will enhance organizational capacity to understand and develop these frameworks. Our goal is to introduce this integrated framework in a way that you, our readers can see its connection to your settings, and apply the underlying shared positions and principles to your own work. Finally, the described model serves as the foundation upon which all other chapters' contents have been developed"--
