How much risk should we take? A Short Guide to Risk Appetite sets out to help all those who need to decide how much risk can be taken in a particular risky and important situation. David Hillson and Ruth Murray-Webster introduce the RARA Model to explain the complementary and central roles of Risk Appetite and Risk Attitude, and along the way they show how other risk-related concepts fit in. Risk thresholds are the external expression of inherent risk appetite, and the challenge is how to set the right thresholds. By progressively deconstructing the RARA Model, the authors show that the essential control step is our ability to choose an appropriate risk attitude. The book contains practical guidance to setting risk thresholds that take proper account of the influences of organisational risk culture and the individual risk preferences of key stakeholders. Alongside this, individuals and organisations need to choose the risk attitude that will optimise their chances of achieving the desired objectives.

This book transforms archaeological knowledge of Nazareth by publishing over 80 years of archaeological work at the Sisters of Nazareth convent, including a detailed re-investigation in the early twenty-first century under the author's direction. Although one of the world's most famous places and of key importance to understanding early Christianity, Nazareth has attracted little archaeological attention. Following a chance discovery in the 1880s, the site was initially explored by the nuns of the convent themselves — one of the earliest examples of a major programme of excavations initiated and directed by women — and then for decades by Henri Sen è s, whose excavations (like those of the nuns) have remained almost entirely unpublished. Their work revealed a complex sequence, elucidated and dated by twenty-first century study, beginning with a partly rock-cut Early Roman-period domestic building, followed by Roman-period quarrying and burial, a well-preserved cave-church, and major surface-level Byzantine and Crusader churches. The interpretation and broader implications of each phase of activity are discussed in the context of recent studies of Roman-period, Byzantine, and later archaeology and contemporary archaeological theory, and their relationship to written accounts of Nazareth is also assessed. The Sisters of Nazareth Convent provides a crucial archaeological study for those wishing to understand the archaeology of Nazareth and its place in early Christianity and beyond.

To Mr. Tate Howard, You are quite possibly the most infuriating, annoying and grumpy man I ' ve ever met in my life. I know you think that you ' re God ' s gift to women, but I have a secret to let you in on: you ' re not. You ' re God ' s gift to yourself. Get over your wanna-be cool surfer self and grow up. I thought it was time that someone addressed your big head and told you straight to your face that you're not all that. Just because you have an Ivy league education doesn ' t mean you ' re the smartest man in the world. In fact, I ' m not even sure if you would have gotten in if you didn ' t have rich parents. Yes, I went there. Every woman doesn ' t want to sleep with you and I ' m sure you ' re not even good in bed. And I ' m someone that would know. From, Your Secret Not Admirer

Beyond simulation and algorithm development, many developers increasingly use MATLAB even for product deployment in computationally heavy fields. This often demands that the MATLAB codes run faster by leveraging the distributed parallelism of Graphics Processing Units (GPUs). While MATLAB successfully provides high-level functions as a simulation tool for rapid prototyping, the underlying details and knowledge needed for utilizing GPUs make MATLAB users hesitate to step into it.

[Accelerating MATLAB with GPUs](#) offers a primer on bridging this gap. Starting with the basics, setting up MATLAB for CUDA (in Windows, Linux and Mac OS X) and profiling, it then guides users through advanced topics such as CUDA libraries. The authors share their experience developing algorithms using MATLAB, C++ and GPUs for huge datasets, modifying MATLAB codes to better utilize the computational power of GPUs, and integrating them into commercial software products. Throughout the book, they demonstrate many example codes that can be used as templates of C-MEX and CUDA codes for readers ' projects. Download example codes from the publisher's website: <http://booksite.elsevier.com/9780124080805/> Shows how to accelerate MATLAB codes through the GPU for parallel processing, with minimal hardware knowledge Explains the related background on hardware, architecture and programming for ease of use Provides simple worked examples of MATLAB and CUDA C codes as well as templates that can be reused in real-world projects

It took all of thirty seconds for two shots to bring the world of Margaret Tabaaha crashing down around her. After losing her husband in Afghanistan during

the first year of Operation Enduring Freedom, her two sons were all she had left. Now they had been taken from her violently, deliberately, plunging her into a whiskey bottle and stripping away her reason for living. When Arthur Nakai receives a call from his first love, Margaret, her voice pleading for his help, it comes as he is attending a wake for one of the men he considered a brother from his days in the Marines 6th LAR Wolf Pack Battalion. Feeling a deep and responsible obligation to help her, Arthur soon finds himself involved in the multi-billion-dollar world of the oil and gas industry and coming face-to-face with an old adversary, Elias Dayton. Their paths had crossed when Arthur was a member of the Shadow Wolves, an elite tactical unit within US Customs and Border Protection. Now Dayton runs Patriot Security, a Blackwater-type firm that keeps the oil rigs, gas wells, and man camps secure from the Water Protectors, protesters pushing to stop the fracking and poisoning of Native lands. As Arthur works through the case from his end, Navajo police chief Jake Bilagody tackles it from another angle, looking into the strained relationship between the oil company and the Navajo people, all while searching for a missing Navajo man that may have become an unwilling piece on the reservation checkerboard. But when Arthur learns the identity of the boys ' killer, he struggles to make sense of it. Because if the clues are right, he will be forced to make a decision that will haunt him for the rest of his life.

Since hardware and software-based design and implementation approaches can be applied to Chua's circuits, these circuits are also excellent educative models for studying and experimenting nonlinear dynamics and chaos. This book not only presents a collection of the author's published papers on design, simulation and implementation of Chua's circuits, it also provides a systematic approach to practising chaotic dynamics.
