Popular Mechanics

Das Jahrbuch würdigt die Gewinner des iF product design award 2009, einem der international bedeutendsten Designpreise. Es stellt alle ausgezeichneten Produkte der Kategorien Audio/Video, Telekommunikation, Computer, Licht, Möbel/ Heimtextilien, Haushalt, Freizeit/Lifestyle, Industrie/Gebäude u.v.m. vor.

2009 Appliance Efficiency Rulemaking : Phase I, Part C, Docket #09-AAER-1C

The first part of the book introduces relevant theories of internationalization. In addition to traditional concepts of internationalization (e.g., the product life-cycle approach of Vernon, the Uppsala model, and Porter's diamond approach), particular attention is paid to the

more modern network approaches of internationalization (e.g., systems, new venture/born global, and entrepreneur concepts). In the second part, alternatives for international market entry (e.g., exports, franchising, joint ventures, contract manufacturing, and foreign direct investments) are explained. These market entry modes are categorized according to decision determinants, such as hierarchical control, proximity to the market, risk of investment, and the factor of time, which are important from the point of view of the corporate management involved in international business. The empirical part of this publication, which is the result of a longitudinal study, consists of case studies of Asian firms doing business in the consumer electronics industry. The cases of Samsung, Sony, Sharp, Matsushita (Panasonic), LG Electronics, and TCL China provide fundamental insights into the firms' organizational structures, corporate cultures, respective sales

volume, and earnings performance as well as strategic concepts for their market penetration in Europe. A main emphasis is placed on an understanding of internal firm networks (e.g., diversified business fields and vertical production depth) and external firm networks (e.g., joint ventures, supplier and buyer clusters as well as mutual capital interests). From the author's view, these network grids fundamentally contribute to the fact that Asian firms have more successfully positioned themselves in the market within the last two decades compared to their European competitors in the television set industry (e.g. Grundig, Thomson, or Philips). The networking aims and success factors as well as the changing strategic influence over the years of the partner firms both in bilateral Japanese joint ventures and in European-Asian joint ventures are examined. The book provides complex background information about the development of the European television set market. The analysis

demonstrates that firms holding the position of technological market leaders in their segment simultaneously indicate the most intensive network activities. The further development of the network theory and the detailed and up-to-date case studies of the most important Asian enterprises in the consumer electronics industry contribute to the value of this publication. Furthermore, on the basis of the knowledge gained from this study, chances and risk potentials can be derived for other European industries (e.g., automotive). The book, written in English, is suitable for internationally oriented bachelor's, master's and MBA programs. Additionally, against the background of worldwide competition, the publication at hand offers relevant industry insights for interested political and economic decision makers.

The advent of the international trade regime has compelled many East Asian governments to retreat from strategic trade policy. This book examines how, and to what extent, the nature of industry and international trade regimes, including EU trade policies, have impacted on their market power and transformed Korean state-corporate power relations.

This book concerns industry creation as knowledge creation. The authors argue that a new class of global, knowledge-driven manufacturing industries has emerged in which learning, continuity, and speed define competition. In these new industries, access to knowledge creation processes matters more than ownership of physical assets. Location matters only insofar as it

confers learning advantages and market access. Companies need strategies that can mobilize their organizations' country-specific strengths and freely leverage them in open, global learning partnerships with allies, suppliers, and customers. *Managing New Industry Creation* distills principles that managers can use to seize leadership for their companies as these new industries emerge. The authors draw their insights from firsthand discussions with over 160 managers and scientists who helped found the high-information-content flat panel display (FPD) industry. In the early 1990s, large-format FPDs exploded into public knowledge as a critical enabling technology for notebook computers. In the future, FPDs will increasingly function as the face by which users interact with technology products. The book recounts the business decisions that propelled the industry from humble beginnings to empower a globally mobile workforce and eventually build wall-hanging, high definition televisions that every

household can afford. The FPD industry was the first new manufacturing industry to fully emerge in a global economy defined more by trade in knowledge than in physical products. Although FPDs were commercialized in Japan, the joint efforts of an international community of companies made high-volume production of large displays viable. Companies from outside of Japan—including IBM, Applied Materials, and Corning—achieved key positions by challenging U.S.-centered preconceptions of innovation, new business creation, and management process, giving unprecedented global authority and responsibility to their Japanese affiliates. Their success established new rules for competing in the knowledge-driven, global manufacturing industries of the future, first described here for managers, R&D scientists, academics, and students of corporate strategy.
