A reflection is an afterthought. While things are happening, we only think about the here and now. It is only afterwards that we have the opportunity to

rethink, analyse, consider and REFLECT. The author George Manus has through all his life reflected over large and small. This has already resulted in two books in this genre, the first, "REFLECTIONS I - in words and pictures", and the second, "REFLECTIONS II - in words and proverbs". This third book got the title "REFLECTIONS III - in words and fantasy images", as many of the reflections/stories are related to fantasy. The images are supplied by the Danish architect and visual artist Jan Arnts pictorial series FANTASIES. The book contains no less than 52 reflections /stories, where the

author among others treats subjects like LIGHT and SHADOWS, WITH MY BACK AGAINST THE WALL and FEELING OF GUILT... Yes, even a TYPEWRITER is taken with loving care. All are reflections /stories which can only make you wiser. Happy reading. Revised 2nd edition published in 2018

Handbook of X-ray Imaging
Throughout his life, George Manus has reflected on big and small, which has already resulted in 19 books. He claims that while things are happening, we only get to think in the present. It is only afterwards that we have time and opportunity to think

analogize and consider. The importance the author attaches to the idea of reflection is in other words afterthoughts. In this, his twentieth book, George Manus has picked out thoughts from "Reflections" I - II and III, as well as "Thoughts". Thoughts were written, one every day, on the first 51 days of 2001, while the Reflections spread as far back as 1989.

The book's scope includes 2D and 3D X-ray imaging techniques from soft-X-ray to megavoltage energies,

including computed tomography, fluoroscopy, dental imaging and small animal imaging, with several chapters dedicated to breast imaging techniques. 2D and 3D industrial imaging is incorporated, including imaging of artworks. Specific attention is dedicated to techniques of phase contrast X-ray imaging. The approach undertaken is one that illustrates the theory as well as the techniques and the devices routinely used

in the various fields. Computational aspects are fully covered, including 3D reconstruction algorithms, hard/software phantoms, and computer-aided diagnosis. Theories of image quality are fully illustrated. Historical, radioprotection, radiation dosimetry, quality assurance and educational aspects are also covered.
