Without a doubt, new
technologies, and notably the
Internet, have had a profound
and lasting impact on the
marketing function. A
paradigm shift has occurred
which will forever change the
way marketers and marketing
managers work. This doesn ' t
mean, however, that ' old '
marketing tools are no longer
relevant. In this brand new
textbook, Cor Molenaar
summarizes classic concepts
and current developments to
create a new, integrated
marketing model, in which all
components are part of a
customer-oriented approach.
Molenaar highlights the
influence of the application of
IT and the Internet within
marketing and reveals how
this can affect the form, focus
and business model of an

organization. Supplemented by practical examples throughout, e-Marketing is an essential read for all marketing and business administration students.

Advanced Concepts for Intelligent Vision Systems MIT Press

Held to be the fourth largest economy by dint of its purchasing power, India is part of the G-20 major economies with significant influence on regional and global affairs. This book traces the evolution of business in India from the pre-British Raj days to look at the forces that have shaped Indian commerce and economy. From

indigenous business and financial practices to the role of family business and state-owned public sector enterprises, the influence of global business on India, successful business practices of modern India, and the Indian story in modern times—the book presents a well-rounded picture of the country's position in the global business scenario. Looking at the sustainability of the Indian dream, the narrative is supported by case studies of organizations like ITC Limited, ICI India Limited, HCL Limited, and Ranbaxy Laboratories Limited.

An analysis of the ways that software creates new spatialities in everyday life, from supermarket checkout lines to airline flight paths. After little more than half a century since its initial development, computer code is extensively and intimately woven into the fabric of our everyday lives. From the digital alarm clock

that wakes us to the air traffic control system that guides our plane in for a landing, software is shaping our world: it creates new ways of undertaking tasks, speeds up and automates existing practices, transforms social and economic relations, and offers new forms of cultural activity, personal empowerment, and modes of play. In *Code/Space*, Rob Kitchin and Martin Dodge examine software from a spatial perspective, analyzing the dyadic relationship of software and space. The production of space, they argue, is increasingly dependent on code, and code is written to produce space. Examples of code/space include airport check-in areas, networked offices, and caf  s that are transformed into workspaces by laptops and wireless access. Kitchin and Dodge argue that software, through its ability to do work in the world, transduces space. Then Kitchin and Dodge develop a set of conceptual tools for identifying and understanding the interrelationship of software, space, and everyday life, and illustrate their arguments with rich empirical material. And, finally, they issue a manifesto, calling for critical scholarship into the production and workings of code rather than simply the technologies it enables—a new kind of social science focused on explaining the social, economic, and spatial contours of software.

The first edition of *Silicon Germanium Materials & Devices - A Market & Technology Overview to 2006* examines the development of the silicon germanium business over a six-year period 2001 to 2006. It analyses the trends in markets, technologies and industry structure and profiles all the major players. It is specifically aimed at users and manufacturers of substrates, epiwafers, equipment and devices. The analysis includes a competitive assessment of the market of silicon germanium vs. gallium arsenide, indium phosphide vs. other forms of silicon. *Silicon Germanium*

Materials & Devices - A Market & Technology Overview to 2006 is designed to assist with business plans, R&D and manufacturing strategies. It will be an indispensable aid for managers responsible for business development, technology assessment and market research. The report examines the rapid development of silicon germanium from an R&D curiosity to production status. An extensive treatment from materials through processes to devices and applications it encapsulates the entire silicon germanium business of today and assesses future directions. For a PDF version of the report please call Tina Enright on +44 (0) 1865 843008 for price details.

This story starts with the death of an old man, Alexander (Alex) Sykes, and his afterlife life. Upon his return from a trip to the astral plane, he discovers

that police have been called to his apartment. He quickly finds out why: he was dead. Alex was looking at his own corpse! There was nothing that he can do now, so he left. Alex looked into the night sky and said, I want to go there, and he was off. He couldn't explain it, so he just went with it. He discovered several inhabited planets, some with what are probably animal life, but as to whether they were sentient, Alex didn't know. After a few more planets, Alex found the Qythe definitely intelligent on a planet that was more urban than not. After his first contact with the Qythe, Alex discovers that they have an advanced mental ability that our earthly computers can't match. Yet despite their great intellects and history, they are doomed, and unless Alex and his growing circle of friends and allies can help, the Qythe will die. So Alex, with his own mental ability, discovered by accident, does what it takes to convince others

of the need to work together to save his new friends: Dr. Philips, physicist of JPL; Dr. Bernstein, director of Physics, JPL; Dr. Colin Andres, psychiatrist/parapsychologist, JPL; Dr. Dawn Runningdeer, quantum physics, West Coast Institute of Technology; and Rosa Seville, former NASA astronaut. These and others will be responsible for the salvation of the Qythe, but even with the help of advanced science from the Qythe, can Alex and his human friends pull it off and still deal with the threat of destruction from one of his own?
