Writing Philosophy Oxford University Press on Demand

Every society has rules, dogmas, and convictions. Some societies demand for unquestionable

obedience to what they hold as true. However, freedom of speech, freedom of belief, and freedom of the will demands we free ourselves from this kind of boxed obedience. Since the time of Plato, philosophers have typically been carrying out this mission by subjecting everyday convictions to a constructive, logical scrutiny with the aim of thrashing out inconsistencies, conjectures, and misconceptions. A philosopher aims at an attempt to reach a critical standpoint, enabling one to do away with confusion and provide a solid, rational justification for what he or she retains on a given phenomenon or concept. For an in-depth understanding of how this can be achieved, this book is a must read.

Writing, Teaching and Researching History in the Electronic Age Rowman & Littlefield
Philosophy and Theory in Educational Research: Writing in the margin explores the practices of reading and writing in educational

philosophy and theory. Showing that there is no 'right way' to approach research in educational philosophy, but illustrating its possibilities, this text invites an engagement with philosophy as a possibility – and opening possibilities – for educational research. Drawing on their own research and theoretical and philosophical sources, the authors investigate the important issue of what it means to read and write when there is no prescribed structure. Innovative in its contribution to the literature, this edited volume enlightens readers in three ways. The volume focuses on the practices of reading and writing that are central to research in educational philosophy, suggesting that these practices constitute the research, rather than simply reporting it. It is not a prescriptive guide and should not be read procedurally. Rather, it is intended to illustrate the possibilities for this kind of research, and to suggest starting points for those pursuing research projects. Finally, attention is given to the ways in which conducting educational philosophy can be educative in itself, both to the researcher in writing it, and to its audience in reading it. With contributions from international scholars in the field of educational philosophy, this book is a valuable guide for practitioner-researchers, taught postgraduate and doctoral students, and early career researchers in university education departments. Academic staff teaching research methods and seeking to introduce their students to philosophy-as-research without wishing to offer a prescriptive 'how to' guide will also find this book of particular interest.

They rejected all but physical laws as having any impact on the operations of human life and the universe. Contributors focus on the way Tyndall and his correspondents developed their ideas through letters, periodicals and scientific journals and challenge previously held assumptions about who gained authority, and how they attained and defended their position within the scientific community.

The Seminary Student Writes Springer

In this volume, Julinna Oxley and Ramona Ilea bring together essays that examine and defend the use of experiential learning activities to teach philosophical terms, concepts, arguments, and practices. Experiential learning emphasizes the importance of student engagement outside the traditional classroom structure. Service learning, studying abroad, engaging in large-scale collaborative projects such as creating blogs, websites and videos, and practically applying knowledge in a reflective, creative and rigorous way are all forms of experiential learning. Taken together, the

contributions to *Experiential Learning in Philosophy* argue that teaching philosophy is about doing philosophy with others. The book is divided into two sections: essays that engage in the philosophical debate about defining and implementing experiential learning, and essays that describe how to integrate experiential learning into the teaching of philosophy. *Experiential Learning in Philosophy* provides a timely reflection on best practices for teaching philosophical ideals and theories, an examination of the evolution of the discipline of philosophy and its adoption (or reclamation) of active modes of learning, and an anticipation of the ways in which pedagogical practices will continue to evolve in the 21st century.

Economists consider the legacy of Karl Brunner's monetarism and its influence on current debates over monetary policy. Monetarism emerged in the 1950s and 1960s as a school of economic thought that questioned certain tenets of Keynesianism. Emphasizing the monetary nature of inflation and the responsibility of central banks for price stability, monetarism held sway in the inflation-plagued 1970s, but saw its influence begin to decline in the 1980s. Although Milton Friedman is the economist most closely associated with the development of monetarism, it was Karl Brunner

(1916–1989) who introduced the term into the current vocabulary of economics and shaped its meaning. In this volume, leading economists—many of them Brunner’s friends and former colleagues—consider the influence of Brunner’s monetarism on current debates over monetary policy. Some contributors were participants in debates between Keynesians and monetarists; others analyze specific aspects of monetarism as theorized by Brunner and his close collaborator Allan Meltzer, or address its influence on US and European monetary policy. Others take the opportunity to examine Brunner-Meltzer monetarism through the lens of contemporary macroeconomics and monetary models. The book grows out of a symposium that marked the 100th anniversary of Brunner’s birth. Contributors Ernst Baltensperger, Michael D. Bordo, Pierrick Clerc, Alex Cukierman, Michel De Vroey, James Forder, Benjamin M. Friedman, Kevin D. Hoover, Thomas J. Jordan, David Laidler, Allan H. Meltzer, Thomas Moser, Edward Nelson, Juan Pablo Nicolini, Charles I. Plosser, Kenneth Rogoff, Marcel Savioz, Jürgen von Hagen, Stephen Williamson
