How to check the PHP version on Linux – The Geek Diary

There is a tutorial for it here where basically you need to extract the relevant file (ioncube_loader_lin_5.6.so), put it in the relevant folder (20131226) under your php5.6 directory and add its settings in all php5.6 php.ini files.

Zend Engine - Wikipedia

Viewing phpinfo() in browser will give you the output for the web server PHP version. php -v in a terminal gives you the output for the CLI PHP version. They are not the same and can have different modules / configuration. Hopefully this will point you in the right direction. –   Tim Fountain Aug 23 '18 at 12:57

PHP Zend OPcache Installation | GeoffStratton.com

Zend Engine 1 is the internal engine used by PHP for the entire version 4 release line. It is no longer considered active, but the old ZE1 documentation is preserved here exactly as it was. add a note

3.3.9 not showing in phpinfo, but does for CLI -

Zend Forums

The Zend OPcache is a caching system that seeks to improve PHP performance by keeping precompiled PHP code in the shared memory of your web server. Since PHP is an interpreted language that has to be compiled into a set of intermediate instructions ("opcodes") when someone accesses your PHP page or site, not having to perform this recompilation for every request can reduce both the response ...
