Each book provides simple and straightforward

advice on how to teach ELLs through a given subject area, and how to teach content to ELLs who are at different levels of English language proficiency than the rest of their class. Authored by both language and content area specialists, each volume arms readers with practical, teacher-friendly strategies, and subject-specific techniques. *Teaching Science to English Language Learners* offers science teachers and teacher educators a

straightforward approach for engaging ELLs learning science, offering examples of easy ways to adapt existing lesson plans to be more inclusive. The practical, teacher-friendly strategies and techniques included here are proven effective with ELLs, and many are also effective with all students. The book provides context-specific strategies for the full range of the secondary sciences curriculum, including physical science, life science, earth and

space science, science as inquiry, and history and nature of science and more. A fully annotated list of web and print resources completes the book, making this a one volume reference to help science teachers meet the challenges of including all learners in effective instruction. Special features: practical examples of science exercises make applying theory to practice simple when teaching science to ELLs an overview of the National

*REALIDADES 2* Houghton Mifflin  
There are about 100 billion nerve cells or neurons in your brain's cortex. They were all there when you were born. The theory right now is that you do not grow new brain cells. You have x amount at birth and that's it. Every neuron is capable of

sprouting up to 20,000 dendrites if they are nourished properly and stimulated. In addition to neurons, we each have up to 900 billion glial cells which develop myelin, the sheathing that wraps around neuron axons. Axons are the nerve pathways that send messages from neuron to neuron. We grow new brain cells in the cerebellum, the lobe in the back of the brain that is responsible for motion, moving our bodies and muscle control. The neurons, glial cells and new brain cells in the cerebellum all depend on what we feed our bodies
