There are dozens of
myths surrounding
educational reform
today, maintaining the
school ' s role in

economic competitiveness, the deficiency of teachers, the benefits of increased testing, and the worthiness of privatization. In this volume, the editors argue that this discussion has been co-opted to reflect the values and worldviews of special interest groups such as elites in power, politicians, corporate educational foundations, and the media. Prominent educational writers tackle contemporary issues such as neoliberalism, suburban schooling, charter schools and parental involvement. They expose the "logic behind the talk" and critically examine these

problematic beliefs to uncover meaningful improvements in education which are better grounded in the social, economic, political and educational realities of contemporary society.

This book looks at a number of topics in economic education, presenting multiple perspectives from those in the field to anyone interested in teaching economics. Using anecdotes, classroom experiments and

surveys, the contributing authors show that, with some different or new techniques, teaching economics can be more engaging for students and help them better retain what they learned. Chapters cover a wide range of approaches to teaching economics, from interactive approaches such as utilizing video games and Econ Beats, to more rigorous examinations of government policies, market outcomes and exploring case studies from specific courses. Many of the chapters incorporate game theory and provide worked out examples of games designed to help students with

intuitive retention of the material, and these games can be replicated in any economics classroom. While the exercises are geared towards college-level economics students, instructors can draw inspiration for course lectures from the various approaches taken here and utilize them at any level of teaching. This book will be very useful to instructors in economics interested in bringing innovative teaching methods into the classroom.

All divisions of internal medicine (e.g. cardiology, rheumatology, and gastroenterology) are covered and a section on undifferentiated symptom-based presentations (e.g. fatigue, fever, and unintentional weight loss) is included. This book provides well-constructed teaching scripts for commonly encountered clinical scenarios, is authored by experienced academic internists and allows the reader to either implement them directly or modify them for their own use. Each teaching script is designed to be taught in 10-15 minutes, but can be easily adjusted by the reader for longer or shorter talks. Teaching Scripts in Internal Medicine is an ideal tool for internal medicine attending physicians and trainees, as well as physician's assistants, nurse practitioners, and all others who teach and learn internal medicine. *Off the Field, in the Office, on the News* Elsevier India Test Prep Books' ACS General Chemistry Study Guide: Test Prep and Practice Test Questions for
