Evidence-Based Physical Examination OECD Publishing

Sport and physical activity are embedded in our education systems and in wider society. This book takes the broadest possible look at this topic, across every key discipline and on different continents, opening up important new directions for the future development of sport and physical activity education. The book examines education in sport coaching, sport management, PE teacher training, physical activity and health promotion, and the emerging discipline of outdoor studies, considering how trends such as globalisation, digitalisation, and privatisation are having a profound impact on education programs. It identifies some of the most important societal issues that must be addressed by sport and physical activity educators, including healthy lifestyles, inequality, intercultural aspects, human rights, and emerging technologies, and looks at how sport and physical activity education in Europe, North America, Latin America, Asia, and Australasia is evolving to meet these challenges. Designed to invite self-reflection, to provoke debate and to open up new cross-disciplinary and international perspectives within sports organisations and higher education institutions, this book is fascinating reading for advanced students, researchers, teachers, and policy makers with an interest in sport and physical activity.

Discussions surrounding inclusivity have grown exponentially in recent years. In today's world where diversity, equity, and inclusion are the hot topics in all aspects of society, it is more important than ever to define what it means to be an inclusive society, as well as challenges and potential growth. Those with physical and intellectual disabilities, including vision and hearing impairment, Down syndrome, locomotor disability, and more continue to face challenges of accessibility in their daily lives, especially when facing an increasingly digitalized society. It is crucial that research is brought up to date on the latest assistive technologies, educational practices, work assistance, and online support that can be provided to those classified with a disability. The Research Anthology on Physical and Intellectual Disabilities in an Inclusive Society provides a comprehensive guide of a range of topics relating to myriad aspects, difficulties, and opportunities of becoming a more inclusive society toward those with physical or intellectual disabilities. Covering everything from disabilities in education, sports, marriages, and more, it is essential for psychologists, psychiatrists, pediatricians, psychiatric nurses, clinicians, special education teachers, social workers, hospital administrators, mental health specialists, managers, academicians, rehabilitation centers, researchers, and students who wish to learn more about what it means to be an inclusive society and best practices in order to get there.

There are dozens of myths surrounding educational reform today, maintaining the school's role in economic competitiveness, the deficiency of teachers, the benefits of increased testing, and the worthiness of privatization. In this volume, the editors argue that this discussion has been co-opted to reflect the values and worldviews of special interest groups such as elites in power, politicians, corporate educational foundations, and the media. Prominent educational writers tackle contemporary issues such as neoliberalism, suburban schooling, charter schools and parental involvement. They expose the "logic behind the talk" and critically examine these problematic beliefs to uncover meaningful improvements in education which are better grounded in the social, economic, political and educational realities of contemporary society.

While many scientists are familiar with fractals, fewer are familiar with scale-invariance and universality which underlie the ubiquity of their shapes. These properties may emerge from the collective behaviour of simple fundamental constituents, and are studied using statistical field theories. Initial chapters connect the particulate perspective developed in the companion volume, to the coarse grained statistical fields studied here. Based on lectures taught by Professor Kardar at MIT, this textbook demonstrates how such theories are formulated and studied. Perturbation theory, exact solutions, renormalization groups, and other tools are employed to demonstrate the emergence of scale invariance and universality, and the non-equilibrium dynamics of interfaces and directed paths in random media are discussed. Ideal for advanced graduate courses in statistical physics, it contains an integrated set of problems, with solutions to selected problems at the end of the book and a complete set available to lecturers at [www.cambridge.org/9780521873413](http://www.cambridge.org/9780521873413).
