Physical inactivity is a key determinant of health across the lifespan. A lack of activity increases the risk of heart disease, colon and breast cancer, diabetes mellitus, hypertension, osteoporosis, anxiety and depression and others diseases. Emerging literature has suggested that in terms of mortality, the global population health burden of physical inactivity approaches that of cigarette smoking.

The prevalence and substantial disease risk associated with physical inactivity has been described as a pandemic. The prevalence, health impact, and evidence of changeability all have resulted in calls for action to increase physical activity across the lifespan. In response to the need to find ways to make physical activity a health priority for youth, the Institute of Medicine's Committee on Physical Activity and Physical Education in the School Environment was formed. Its purpose was to review the current status of physical activity and physical education in the school environment, including before, during, and after school, and examine the influences of physical activity and physical education on the short and long term physical, cognitive and brain, and psychosocial health and development of children and adolescents. Educating the Student Body makes recommendations about approaches for strengthening and improving programs and policies for physical activity and physical education in the school environment. This report lays out a set of guiding

principles to guide its work on these tasks. These included: recognizing the benefits of instilling life-long physical activity habits in children; the value of using systems thinking in improving physical activity and physical education in the school environment; the recognition of current disparities in opportunities and the need to achieve equity in physical activity and physical education; the importance of considering all types of school environments; the need to take into consideration the diversity of students as recommendations are developed. This report will be of interest to local and national policymakers, school officials, teachers, and the education community, researchers, professional organizations, and parents interested in physical activity, physical education, and health for school-aged children and adolescents.

Run, Don't Walk Jones & Bartlett Learning

*M*A*S*H* meets *Scrubs* in a sharply observant, darkly funny, and totally unique debut memoir from physical therapist Adele Levine. In her six years at Walter Reed Army Medical Center, Adele Levine rehabilitated soldiers admitted in worse and worse shape. As body armor and advanced trauma

care helped save the lives—if not the limbs—of American soldiers fighting in Afghanistan and Iraq, Walter Reed quickly became the world leader in amputee rehabilitation. But no matter the injury, physical therapy began the moment the soldiers emerged from surgery. Days at Walter Reed were intense, chaotic, consuming, and heartbreaking, but they were also filled with camaraderie and humor. Working in a glassed-in fishbowl gymnasium, Levine, her colleagues, and their combat-injured patients were on display at every moment to tour groups, politicians, and celebrities. Some would shudder openly at the sight—but inside the glass and out of earshot, the PTs and the patients cracked jokes, played pranks, and compared stumps. With dazzling storytelling, *Run, Don't Walk* introduces a motley array of oddball characters including: Jim, a retired lieutenant-colonel who stays up late at night baking cake after cake, and the militant dietitian who is always after him; a surgeon who only speaks in farm analogies; a therapy dog gone rogue;—and Levine's toughest patient, the wild, defiant Cosmo, who comes in with one leg amputated and his other leg shattered. Entertaining, engrossing, and ultimately inspiring, *Run, Don't Walk* is a fascinating look into a hidden world.
