Jenny Barajas would usually rather blend in with the back row of her class, but this year, things change when the school's most contemporary teacher, Ms. Morgan, becomes her science teacher. Ms. Morgan introduces an environmental spin on traditional topics, inspiring Jenny to watch a documentary on plastics in the ocean. Jenny is now on a mission to end single-use plastics! However, blind passion reveals her limited knowledge of ocean life and environmental justice, challenging her to call upon the help of the community. She must mend old friendships, reconcile her insecurities with her condescending but brilliant and outspoken older sister, and lean on Ms. Morgan for guidance, all the while leveraging these relationships to find the courage to use her voice. Learning to lobby around the complexities of plastic pollution, Jenny embarks on an advocacy campaign by documenting her class in the hopes to motivate others in joining her mission. Can student documentation be the spark to fuel a movement for future generations? We Have Something to Say! by Sonia Myers is a journey of community and discovering your voice. It reminds us that no matter where we begin, we have the power to take action and make change.

The Artifact Cornell University Press

For more than two centuries, Oak Island, Nova Scotia, has been studied, searched, probed and cursed all the while failing to give up its secrets. Joy Steele's ground-breaking historical research into the island's true history is no less intriguing. In this second edition, Ms. Steele is joined by professional geologist Gordon Fader to not only solidify her theory, but to expand on it, including a thorough explanation of the area's geology.

The American Physical Therapy Association Book of Body Repair & Maintenance Ballantine Books

Brookhaven National Laboratory sprawls in the serene natural surroundings of Eastern Long Island, New York. Deep within a heavily guarded compound on the grounds of the Laboratory, a forbidding compound houses the nation's most protected secret: An active alien Artifact. Estimated at several millions of years of age, impervious to all efforts of modern science to penetrate its secrets, the Artifact taunts researchers with burst of mysterious radiation that may be efforts at communication. Now the two top researchers have conducted unauthorized experiments using new technology, and something has awakened inside, something as old as time, wielding incalculable power and an agenda that would spell doom for humanity. As horrifying mutations and destruction descends on Long Island, it is only a mere portend of the true horror yet to come. While America's military struggles against an impossible power, only a 12-year-old crippled computer hacker and an aging police detective hold the key to the Artifact. But first they must overcome disbelieving authorities in a desperate race against time, with the very survival of humanity in the balance.

A hilarious new middle-grade fade from Justin A. Reynolds that asks: What happens when five unsupervised kids face the apocalypse under outrageously silly circumstances? Twelve-year-old Eddie Gordon Holloway has concocted his most genius plan ever to avoid chores... especially the dreaded L-A-U-N-D-R-Y. If he can wear all the clothes he owns, he'll only have to do the laundry once during his school break. On the day of the highly anticipated Beach Bash, Eddie's monstrous pile of dirty laundry is found by his mom. And Eddie's day has just taken a turn for the worst. Now he's stuck at home by himself, missing the bash, and doing his whole pile of laundry. But mid-cycle, the power goes out! With his first load of laundry wet and the rest of his stuff still filthy, he sets out to explore the seemingly empty neighborhood in his glow-in-the-dark swim trunks, flip-flops, and a beach towel. He soon meets up with other neighborhood kids: newcomer Xavier (who was mid-haircut and has half his head shaved), Eddie's former friend Sonia (who has spent her entire break trying to beat a video game and was mid-battle with the final boss), and siblings Trey and Sage (who are dealing with major sibling drama). As they group up to cover more ground and find out what happened, they realize that their families aren't coming back anytime soon. And as night falls, the crew realizes that they aren't just the only people left in the neighborhood, they might be the only people left... anywhere.

We Have Something to Say! Independently Published

Environmental educators face a formidable challenge when they approach climate change due to the complexity of the science and of the political and cultural contexts in which people live.

There is a clear consensus among climate scientists that climate change is already occurring as a result of human activities, but high levels of climate change awareness and growing levels of concern have not translated into meaningful action. Communicating Climate Change provides environmental educators with an understanding of how their audiences engage with climate change information as well as with concrete, empirically tested communication tools they can use to enhance their climate change program. Starting with the basics of climate science and climate change public opinion, Armstrong, Krasny, and Schuldt synthesize research from environmental psychology and climate change communication, weaving in examples of environmental education applications throughout this practical book. Each chapter covers a separate topic, from how environmental psychology explains the complex ways in which people interact with climate change information to communication strategies with a focus on framing, metaphors, and messengers. This broad set of topics will aid educators in formulating program language for their classrooms at all levels. Communicating Climate Change uses fictional vignettes of climate change education programs and true stories from climate change educators working in the field to illustrate the possibilities of applying research to practice. Armstrong et al, ably demonstrate that environmental education is an important player in fostering positive climate change dialogue and subsequent climate change action. Thanks to generous funding from Cornell University, the ebook editions of this book are available as Open Access from Cornell Open (cornellpress.cornell.edu/cornell-open) and other Open Access repositories.

Work Smarter with Social Media Pocket Books

Time, Duration and Change in Contemporary Art presents a major study of time as a key aesthetic dimension of recent art practices. This book explores different aspects of time across a broad range of artistic media and draws on recent movements in philosophy, science, and technology to show how artists generate temporal experiences that resist the standardized time of modernity: Olafur Eliasson's melting icebergs produce fragile temporal ecologies; Marina Abramovic's performances test the durations of the human body; Christian Marclay's The Clock conflates past and present chronologies. This book examines alternative frameworks of time, duration, and change in prominent philosophical, scientific, and technological traditions, including physics, psychology, phenomenology, neuroscience, media theory, and selected environmental sciences. It suggests that art makes a crucial contribution to these discourses not by "visualizing" time, but by entangling viewers in different sensory, material, and imaginary temporalities.

The Psychology of Money Morgan James Publishing

Doing well with money isn't necessarily about what you know. It's about how you behave. And behavior is hard to teach, even to really smart people. Money—investing, personal finance, and business decisions—is typically taught as a math-based field, where data and formulas tell us exactly what to do. But in the real world people don't make financial decisions on a spreadsheet. They make them at the dinner table, or in a meeting room, where personal history, your own unique view of the world, ego, pride, marketing, and odd incentives are scrambled together. In *The Psychology of Money*, award-winning author Morgan Housel shares 19 short stories exploring the strange ways people think about money and teaches you how to make better sense of one of life's most important topics.

The Big Pivot Harvard Business Review Press

From acclaimed science author Jim Baggot, a lively, provocative, and "intellectually gratifying" critique of modern theoretical physics (*The Economist*). Where does one draw the line between solid science and fairy-tale physics? Jim Baggott argues that there is no observational or experimental evidence for many of the ideas of modern theoretical physics: super-symmetric particles, super strings, the multiverse, the holographic principle, or the anthropic cosmological principle. Unafraid to challenge prominent theorists, Baggott offers engaging portraits of many central figures of modern physics, including Stephen Hawking, Paul Davies, John D. Barrow, Brian Greene, and Leonard Susskind. Informed, comprehensive, and balanced, *Farewell to Reality* discusses the latest ideas about the nature of physical reality while clearly distinguishing between fact and fantasy, providing essential and entertaining reading for everyone interested in what we know and don't know about the nature of the universe and reality itself.

Scarcity Morgan James Publishing

When Richard and Sally Price stepped out of the canoe to begin their fieldwork with the Saamaka Maroons of Suriname in 1966, they were met with a mixture of curiosity, suspicion, ambivalence, hostility, and fascination. With their gradual acceptance into the community they undertook the work that would shape their careers and influence the study of African American societies throughout the hemisphere for decades to come. In *Saamaka Dreaming* they look back on the experience, reflecting on a discipline and a society that are considerably different today. Drawing on thousands of pages of field notes, as well as recordings, file cards, photos, and sketches, the Prices retell and comment on the most intensive fieldwork of their careers, evoke the joys and hardships of building relationships and trust, and outline their personal adaptation to this unfamiliar universe. The book is at once a moving human story, a portrait of a remarkable society, and a thought-provoking revelation about the development of anthropology over the past half-century.

I Love Growing Older, But I'll Never Grow Old Nimbus Publishing (CN)

In recent years Digital Electronics & Microprocessor is being used extensively in computers, microprocessor and very large scale integration (VLSI) design and digital signal processing

research and many other things. This rapid progress in Electronics Engineering has created an increasing demand for trained Digital System Designs personnel. This book is intended for the undergraduate and postgraduate students specializing in Electronics Engineering, Computer Science Engineering and Information Technology. It will also serve as reference material for engineers employed in industry. The fundamental concepts and principles behind Digital Electronics & Microprocessor are explained in a simple, easy- to- understand manner. Each chapter contains a large number of solved example or problem which will help the students in problem solving and designing of Electronics system. This text book is organized into Thirteen chapters. Chapter 1: Number Systems and Boolean Algebra Chapter 2: Combinational Circuits Chapter 3: Sequential Circuits Chapter 4 : Digital Logic Families Chapter 5: Memory & Programmable Logic Chapter 6: Asynchronous Sequential Logic Chapter-7: Digital System Design Using Hardware Chapter 8: Digital System Design Using VHDL Chapter-9: Design of Fast Adder Chapter 10: Design of Fast Multiplier Chapter 11: Basics of Microprocessor Chapter 12: Programing of Microprocessor Chapter 13: Micro Controller & Its Applications The book Digital Electronics & Microprocessor is written to cater to the needs of the undergraduate courses in the discipline of Electronics & Communication Engineering, Computer Science Engineering, Information Technology, Electronics & Instrumentation Engineering, Electrical & Electronics Engineering and postgraduate students specializing in Electronics. It will also serve as reference material for engineers employed in industry. The fundamental concepts and principles behind Digital Electronics & Microprocessor are explained in a simple, easy- to- understand manner. Digital Electronics & Microprocessor also gives the possible experiments of digital logic design using VHDL and Hardware that can be done by students of B.E. /B.Tech./M.Tech. and Ph.D. level. Salient Features*Detailed coverage of Number Systems and Boolean Algebra, Combinational Circuits and Sequential Circuits *Comprehensive chapters on Digital Logic Families, Memory & Programmable Logic and Asynchronous Sequential Logic *Detailed coverage of Digital System Design Using Hardware, Digital System Design Using VHDL, Design of Fast Adder and Design of Fast Multiplier*Comprehensive chapters on Basics of Microprocessor, Programing of Microprocessor, Microcontroller and Its Application.*Each chapter contains a large number of solved example or objective type's problem which will help the students in problem solving and designing of digital system. *Clear perception of the various problems with a large number of neat, well drawn and illustrative diagrams. *Simple Language, easy- to- understand manner. I do hope that the text book in the present form will meet the requirement of the students doing graduation in Electronics & Communication Engineering, Computer Science Engineering, Information Technology, Electronics & Instrumentation Engineering and Electrical & Electronics Engineering. I shall appreciate any suggestions from students and faculty members alike so that we can strive to make the text book more useful in the edition to come.

It's The End of the World and I'm In My Bathing Suit Simon and Schuster

First published in 1962, this book by esteemed American physiologist and entomologist Vincent Dethier provides an array of helpful examples of how ingeniously controlled experiments are designed and used. Other processes of scientific inquiry are also explained, such as observation, correlation, cause and effect, gathering and interpreting data, hypothesizing, and theory building. Recommended to scientists of all ages! "...This is a superb natural history book and is highly recommended for anyone twelve or older."—Scientific American "The author never 'talks down' to his readers but preserves such delightful and sparkling informal style throughout that we tend to overlook the professional skill with which he attacks his problems, the beauty of the experiments he describes. The book is such pleasant reading that we may not realize that this all represents biological research of a very high order. Among the many excellent features we may note the author's commentaries on scientific method, which are extremely acute, informative, and provocative."—Journal of the American Medical Association "Highly recommended enrichment reading for biology teachers and secondary students in general science or biology.—The Science Teacher

Pre-Suasion Robinson

Describes the machinery of gravity based on the idea that all matter is expanding forever. Derives equations showing that the intuitive notion that this idea can not be correct because objects of different densities would change sizes is wrong. Instead because nothing can go faster than light speed, objects regardless of densities or geometry converge in sizes such that the ratio of all sizes remain almost time invariant. However, there remains a very small difference in the ratios that can be measured under some conditions and shows up in certain long distance measurements. One example being the three Pioneer 10/11 anomalous accelerations and the apparent (but unexplained) expansion of the earth. The idea is developed and then applied to six problems in physics (bending of starlight, advance of the perihelion of Mercury, behavior of spiral galaxies, expansion of the earth, anomalous acceleration terms for

Pioneer 10/11, and acceleration of universe expansion) showing very nice explanations and solutions matching measurement results with (in some cases) simpler solutions than in the literature.

The author, Chris McMullen, Ph.D., has over twenty years of experience teaching math skills to physics students. He prepared this comprehensive workbook to share his strategies for mastering fractions. With 20 chapters and 250 pages, this workbook covers a variety of essential fractions skills, including: * fractions, decimals, and percentages* how to find a common denominator* repeating decimals* adding, subtracting, multiplying, and dividing fractions* converting between mixed numbers and improper fractions* solving problems with ratios or proportions* word problems* long division with remainders* reducing fractions* finding reciprocals* what a fraction means visually. This workbook includes a pretest and a posttest to help assess student learning. Comparing pretest and posttest scores helps to measure how much students have learned by using this workbook. Teachers, parents, and even students may find this helpful.
