The Poetry of Victorian Scientists Routledge

Our bee populations are under threat. Over the past 60 years, they have lost much of their natural habitat and are under assault from pesticides and intensive farming. We rely on bees and other insects to pollinate our fruit and vegetables and, without them, our environment and economy will be in crisis. *The Business of Bees* provides the first integrated account of diminishing bee populations, as well as other pollinators, from an interdisciplinary perspective. It explores the role of corporate responsibility and governance as they relate to this critical issue and examines what the impact

will be on consumers, companies, stock markets and ultimately on global society if bee populations continue to decline at a dangerous rate. The book considers the issue of global bee population decline from a variety of disciplines, combining the perspectives of academics in accounting, science and humanities with those of practitioners in the finance industry. The chapters explore the impact of the rapid decline in pollinator populations on the natural world, on corporations, on the stock market and on accounting. *The Business of Bees* will be essential reading for those in academia, business and finance sectors and anyone invested in the future of our planet.

Science Secrets World Scientific

"Accessibly written in an engaging style, this book examines classic popular stories in the history of science. Some of the myths discussed include Franklin's Kite, Newton's Apple, and Thomson's plum pudding model of the atom. Martn ez successfully holds readers' attention by

relying on rich documentation from primary sources to debunk speculations that have become reified over time. He argues that although scientists have disagreed with one another, the disagreements have been productive. Features includes extensive primary source documentation and detailed explanations of how to compare contradictory sources in order to determine which accounts are truly valid"--

Originally published in 1911, this book contains a collection of many of the scientific papers of the Scottish mathematical physicist Peter Guthrie Tait. The work begins with a brief biography of Tait, and the papers included cover some of Tait's most famous research interests, including knot theory and the physics of

golf. This book will be of value to anyone with an interest in the history of science and the work of Tait in particular.

A 1999 biography of one of Germany's most important scientists (active 1890-1933) and an historical examination of physics and chemistry.
The English Language in Singapore Cambridge University Press
This work is based on Sydney Ahlstrom's 1951 Harvard dissertation. The biography of

Francis Ellingwood Abbot has been completely rewritten to focus on the context of his life and, as such, provides a vista into the intellectual and religious world of America in the late nineteenth century. Ahlstrom and one of his former students, Robert Bruce Mullin, began reworking the dissertation in 1983.

A Weekly Bulletin for the Staff of the University of California National Academies Press

From the interior of the Sun, to the upper atmosphere and near-space environment of Earth, and outward to a region far

beyond Pluto where the Sun's influence wanes, advances during the past decade in space physics and solar physics--the disciplines NASA refers to as heliophysics--have yielded spectacular insights into the phenomena that affect our home in space. Solar and Space Physics, from the National Research Council's (NRC's) Committee for a Decadal Strategy in Solar and Space Physics, is the second NRC decadal survey in heliophysics.

Building on the research accomplishments realized during the past decade, the report presents a program of

basic and applied research for the period 2013-2022 that will improve scientific understanding of the mechanisms that drive the Sun's activity and the fundamental physical processes underlying near-Earth plasma dynamics, determine the physical interactions of Earth's atmospheric layers in the context of the connected Sun-Earth system, and enhance greatly the capability to provide realistic and specific forecasts of Earth's space environment that will better serve the needs of society. Although the recommended program is

directed primarily at NASA and the National Science Foundation for action, the report also recommends actions by other federal agencies, especially the parts of the National Oceanic and Atmospheric Administration charged with the day-to-day (operational) forecast of space weather. In addition to the recommendations included in this summary, related recommendations are presented in this report. Nuclear Science Abstracts Cambridge University Press How the NSF became an important yet controversial

patron for the social sciences, influencing debates over their scientific status and social relevance. In the early Cold War years, the U.S. government established the National Science Foundation (NSF), a civilian agency that soon became widely known for its dedication to supporting first-rate science. The agency's 1950 enabling legislation made no mention of the social sciences, although it included a vague reference to "other sciences." Nevertheless, as Mark Solovey shows in this book,

the NSF also soon became a major--albeit controversial--source of public funding for them. An Integrated Approach to Bee Decline and Corporate Responsibility UNEP/Earthprint The fourth report in the Global Environment Outlook series provides a comprehensive, scientifically credible, policy-relevant and up-to-date assessment of, and outlook for, the state of the global environment. Environment for development is the GEO-4 underlying theme and the report pays special attention to the role and impact of the environment on human well-being as well as to

the use of environmental valuation as a tool for decision-making. GEO-4's 2007 publication date marks the half-way point for the Millennium Development Goals, The environment, as well as being the subject of MDG 7, is also a thread that runs through all the goals. Includes Errata. Geological Survey Professional Paper Cambridge University Press The Climate Change 2007 volumes of the Fourth Assessment Report of the Intergovernmental Panel on Climate Change (IPCC) provide the most comprehensive and balanced assessment of climate change available. This IPCC Working Group III volume provides a comprehensive, state-

of-the-art and worldwide overview of scientific knowledge related to the mitigation of climate change. It includes a detailed assessment of costs and potentials of mitigation technologies and practices, implementation barriers, and policy options for the sectors: energy supply, transport, buildings, industry, agriculture, forestry and waste management. It links sustainable development policies with climate change practices. This volume will again be the standard reference for all those concerned with climate change, including students and researchers, analysts and decision-makers in governments and the private sector. Handbook On Big Data And

Machine Learning In The Physical Sciences (In 2 Volumes) MIT Press

This compendium provides a comprehensive collection of the emergent applications of big data, machine learning, and artificial intelligence technologies to present day physical sciences ranging from materials theory and imaging to predictive synthesis and automated research. This area of research is among the most rapidly developing in the last several years in areas spanning materials science, chemistry, and condensed matter physics. Written by world

renowned researchers, the compilation of two authoritative volumes provides a distinct summary of the modern advances in instrument — driven data generation and analytics, establishing the links between the big data and predictive theories, and outlining the emerging field of data and physics-driven predictive and autonomous systems.
