Keeping Women in Science examines the careers of women and men at a large Australian research institute and the challenges that women with or without children experience, often resulting from direct and indirect discrimination and being positioned as outsiders. The research found a huge generational change between the Baby Boomers—the current science leaders—and Gen X and Gen Ys. Younger women and men reject the traditional model of a successful scientist—a single male for whom science is like a religious vocation. Instead, they seek new models for doing science that support dual careers,

work flexibility and work-life balance.

This authoritative and enlightening book focuses on fundamental questions such as what is innovation, who is it relevant for, what are the effects, and what is the role of (innovation) policy in supporting innovation-diffusion? The first two sections present a comprehensive overview of our current knowledge on the phenomenon and analyse how this knowledge (and the scholarly community underpinning it) has evolved towards its present state. The third part explores the role of innovation for growth and development, while section four is concerned with the national innovation system and the role of (innovation) policy in influencing its dynamics and responding to the important challenges facing contemporary societies.

With a never-before published paper by Lord Henry Cavendish, as well as a biography on him, this book offers a fascinating discourse on the rise of scientific attitudes and ways of knowing. A pioneering British physicist in the late 18th and early 19th centuries, Cavendish was widely considered to be the first full-time scientist in the modern sense. Through the lens of this unique thinker and writer, this book is about the birth of modern science.

We've had 20 years of government-level conferences at Kyoto, Copenhagen and Cancun, but greenhouse gas emissions continue to rise. Taking a

cosmopolitan approach to climate change in this excellent and timely book, Paul Harris and his contributors argue that citizen action is an essential complement to state action. The challenging, unsettling and absolutely vital argument of these high quality essays is that distance makes no moral difference in our globalised world; individual high emitters have a duty to reduce their emissions, wherever they are. - Andrew Dobson, Keele, University, UK This collection of provocative essays re-evaluates the world's failed policy responses to climate change, in the process

demonstrating how cosmopolitan ethics can inform global environmental governance. A cosmopolitan worldview points to climate-related policies that are less international and more global. From a cosmopolitan perspective, national borders should not delineate obligations and responsibilities associated with climate change. Human beings, rather than the narrow interests of nation-states, ought to be at the centre of moral calculations and policy responses to climate change. In this volume, expert contributors examine questions of individual and global responsibility, burden

sharing among people and states, international law and environmental justice, capitalism and voluntary action, pluralist cooperation and hegemony, and alternative approaches to climate action and diplomacy. The book helps to illuminate new principles for global environmental policy that can come from cosmopolitan conceptions of climate change.

This study sheds light on the work of the evangelical scientists who sought to bridge the cultural divide Christianity and evolutionary theory. In the well-known Scopes “Monkey Trial” of 1925,

famously portrayed in the film and play *Inherit the Wind*, William Jennings Bryan's clashed with defense attorney Clarence Darrow. The drama, pitting fundamentalist fervor against aggressive agnosticism, illustrated what current scholars call the conflict thesis. Regardless of the actual legal question of the trial, it appeared as though Christianity and science were at war with each other. Decades later, a new generation of evangelical scientists struggled to restore peace. After the Monkey Trial is the compelling history of those evangelical scientists in Britain and America who, unlike their fundamentalist cousins, supported mainstream scientific conclusions of the world and resisted the anti-science impulses of the era.

Christopher M. Rios focuses on two organizations, the American Scientific Affiliation and the Research Scientists' Christian Fellowship (today Christians in Science), who for more than six decades have worked to reshape evangelical engagement with science and redefine what it means to be a creationist.

When the Soviets launched
Sputnik in 1957, thousands of

ordinary people across the
globe seized the opportunity to
participate in the start of the
Space Age. Known as the
"Moonwatchers," these largely
forgotten citizen-scientists
helped professional
astronomers by providing
critical and otherwise
unavailable information about
the first satellites. In *Keep
Watching the Skies!*, Patrick
McCray tells the story of this
network of pioneers who,
fueled by civic pride and
exhilarated by space
exploration, took part in the
twentieth century's biggest
scientific endeavor. Around the
world, thousands of teenagers,
homemakers, teachers, amateur
astronomers, and other citizens
joined Moonwatch teams.
Despite their diverse
backgrounds and nationalities,
they shared a remarkable faith
in the transformative power of
science--a faith inspired by the
Cold War culture in which they
lived. Against the backdrop of

the space race and technological advancement, ordinary people developed an unprecedented desire to contribute to scientific knowledge and to investigate their place in the cosmos. Using homemade telescopes and other gadgets, Moonwatchers witnessed firsthand the astonishing beginning of the Space Age. In the process, these amateur scientists organized themselves into a worldwide network of satellite spotters that still exists today. Drawing on previously unexamined letters, photos, scrapbooks, and interviews, *Keep Watching the Skies!* recreates a pivotal event from a perspective never before examined--that of ordinary people who leaped at a chance to take part in the excitement of space exploration.

An innovative study of books
and reading that focuses on
papermaking in the Renaissance
In *The Nature of the Page*,
Joshua Calhoun tells the story of

handmade paper in Renaissance England and beyond. For most of the history of printing, paper was made primarily from recycled rags, so this is a story about using old clothes to tell new stories, about plants used to make clothes, and about plants that frustrated papermakers' best attempts to replace scarce natural resources with abundant ones. Because plants, like humans, are susceptible to the ravages of time, it is also a story of corruption and the hope that we can preserve the things we love from decay. Combining environmental and bibliographical research with deft literary analysis, Calhoun reveals how much we have left to discover in familiar texts. He describes the transformation of plant material into a sheet of paper, details how ecological availability or scarcity influenced literary output in the sixteenth and seventeenth centuries, and examines the impact of the various colors and qualities of paper on early modern reading practices. Through a discussion of sizing—the mixture used to coat the surface of paper so that ink

would not blot into its fibers—he reveals a surprising textual interaction between animals and readers. He shows how we might read an indistinct stain on the page of an early modern book to better understand the mixed media surfaces on which readers, writers, and printers recorded and revised history. Lastly, Calhoun considers how early modern writers imagined paper decay and how modern scholars grapple with biodeterioration today. Exploring the poetic interplay between human ideas and the plant, animal, and mineral forms through which they are mediated, *The Nature of the Page* prompts readers to reconsider the role of the natural world in everything from old books to new smartphones.
