Prentice Hall Physical Science Addison Wesley Longman

A middle school physical science textbook complete with a video of the power point lessons, links to experiments, and a flash

card review. This is volume one of a planned three volume set. Volume one covers the scientific method, matter and energy. Volume two will cover physics (motion, gravity, pressure, etc) and chemistry (chemical bonding, acids-bases, etc). Volume three will cover everything else (waves, pseudo-science, etc). This is intended to be a middle school level physical science textbook, but it is not written as one. It is easy to understand and funny. It is not only targeted at a middle school student but sounds like one wrote it. A lot of immature examples are used, kids like this. This is not your normal textbook, it is fun to read, but includes all the vocabulary and complex ideas. The current textbooks are full of boring information but they are useless if no one wants to actually read them. A student will want to read this one, so will an adult. It explains in easy language, complex topics. There are links to demonstrations, experiments, simulations, videos, and funny examples of science. This book is written to make physical science fun, as all science should be. Normally a textbook is written so the teacher can make a lesson from it, this one is the opposite. These are my lessons converted into a textbook. I know the lessons and examples work, so the textbook should also. Since this is an e-book it also includes links to my power point lessons (in video form),

links to videos, demonstrations, and simulations. There are a lot of links in each chapter. This is self-published book designed to be an affordable online textbook for middle school or home school children. Volume one covers the Scientific Method, The basics of Matter, and Energy. Table of contents
Unit 1 - What the Heck is science?
Chapter 1 - How to think like a scientist
Chapter 2 - The scientific Method
Chapter 3 - Physical Science
Chapter 4 - Lab safety
Chapter 5 - The controlled experiment
Unit 2 - What is Matter
Chapter 6 - Measuring Matter
Chapter 7 - Atoms
Chapter 8 - Combining matter into new stuff
Chapter 9 - The common states of matter
Unit 3 - The Properties of matter
Chapter 10 - Properties of matter
Chapter 11 - Changing states of Matter
Chapter 12 - Using properties
Unit 4 - Energy

Physical Science Prentice Hall

This should be the last course a student takes before high school biology. Typically, we recommend that the student take this course during the same year that he or she is taking prealgebra. Exploring Creation With Physical Science provides a detailed introduction to the physical environment and some of the basic laws that make it work. The fairly broad scope of the book provides the student with a good understanding of the earth's atmosphere, hydrosphere, and lithosphere. It also covers details on weather, motion, Newton's Laws, gravity, the solar system, atomic structure, radiation, nuclear reactions, stars, and galaxies. The second edition of our physical science course has several features that enhance the value of the course: * There is more color in this edition as compared to the previous edition, and many of the drawings that are in the first edition have been replaced by higher-quality drawings. * There are more experiments in this edition than there were in the previous one. In addition, some of the experiments that were in the previous edition have been changed to make them even more interesting and easy to perform. * Advanced students who have the time and the ability for additional learning are directed to online resources that give them access to advanced subject matter. * To aid the student in reviewing the course as a whole, there is an appendix that contains questions which cover the entire course. The solutions and tests manual has the answers to those questions. Because of the differences between the first and second editions, students in a group setting cannot use both. They must all have the same edition. A further description of the changes made to our second edition courses can be found in the sidebar on page 32.
