Purpose. Speed's
Test is used to test
for superior labral
tears or bicipital
tendonitis..
Technique. To
perform the Speed's
Test, the examiner
places the patient's
arm in shoulder
flexion, external
rotation, full elbow
extension, and
forearm supination;
manual resistance is
then applied by the
examiner in a
downward direction.
The test is
considered to be
positive if pain in the
bicipital ...

Special Test

Physical therapy Gravity Drawer Test (aka Posterior Sign) Purpose: To assess the integrity of the posterior cruciate ligament. Procedure: Patient is supine, their hips flexed to 45 degrees and; their knees flexed to 90 degrees and; their feet are flat on the table; Observe the profile of both knees from the side of the table; Positive Sign: Special Tests (A-Z) Special Testing for Head, Neck, Trunk ... Your physical therapist will test and screen for other, more serious conditions that could cause shoulder pain. To provide a definitive diagnosis, your physical therapist may collaborate with an orthopedic physician or other health care provider, who may order further tests, such as an X-ray to confirm the diagnosis and to rule out other damage to the shoulder, such as a fracture.
