Kinematic equations relate the

variables of motion to one
another. Each equation
contains four variables. The
variables include acceleration
(a), time (t), displacement (d),
final velocity (vf), and initial
velocity (vi). If values of three
variables are known, then the
others can be calculated using
the equations. This page
demonstrates the process with
20 sample problems and
accompanying ...

Physics Questions - Real World Physics Problems 2018 WAEC Physics

Practical Questions and Answers. Observation: The explanation was well attempted but the calculation was poorly rendered by few responding candidates due to poor handling of the exponential figure. Some candidates substituted wrongly. They are supposed to convert the time given from minutes to the S.I unit which is seconds before substituting into the formula.
