PICC (Peripherally Inserted Central Catheter)

Removal ...

The Peripherally Inserted Central Catheter (PICC line) is a central venous access device that is inserted by accessing one of the large veins of the upper extremities, usually in the area of the basilic vein. The catheter is usually threaded into the vein until the tip rests in the superior vena cava just above the

Picc Line Observation Documentation

A PICC line gives your doctor access to the large central veins near the heart. It's generally used to give medications or liquid nutrition. A PICC line can help avoid the pain of frequent needle sticks and reduce the risk of irritation to the smaller veins in your arms.. A PICC line requires careful care and monitoring for complications, including infection and blood clots.
