Composite Mathematics Book-6 S. Chand Publishing

This practical guide outlines a vision for online and distance STEM learning at the elementary level, with creative activities based on eight STEM themes. Online and distance learning may sound fairly straightforward. Instead of learning in a classroom setting, students learn at home with the assistance of online resources. But classroom learning does not always translate easily to online settings, particularly at the elementary level where children should be actively engaging in activities, exploration and discussion. From designing a zoo, to learning to garden, to exploring the night sky, you'll find eight STEM lessons that are creative, hands-on and engaging for elementary learners. Written for teachers and parents, the book unpacks STEM integration across multiple subjects, with connections to the ISTE Standards. The book also includes play-based lessons for young learners, and ideas for innovative design challenges. Each of the eight lessons includes:

- An overview of materials, resources, time and supervision needed.
- Suggested resources to explore, such as simulations and virtual field trips.
- Supplementary learning materials such as questions and quizzes.
- Ideas for games and reinforcement.
- Hands-on activities and engineering design challenges.
- Connections to various content areas as well as children's books, movies and art to keep the learning going after the lesson is completed.

Concluding with a model for designing online and distance STEM learning for elementary-aged children, this book will support teachers and parents in designing the types of resources and learning experiences they need for elementary students' distance learning.

Mathematics for Elementary School Teachers is designed to give you a profound understanding of the mathematical content that you are expected to know and be able to teach. The chapters integrate the National Council of Teachers of Mathematics (NCTM) Standards and Expectations and the new Common Core State Standards, as well as research literature. The five NCTM Process Standards of problem solving, reasoning and proof, communication, connections, and representation highlight ways that teachers present

content, the ways that students learn content, and various ways that students can demonstrate procedural and conceptual understanding. The worked examples and homework questions provide prospective elementary school teachers with opportunities to develop mathematical knowledge, understanding, and skills that they can apply in their own classrooms effectively. The learning path begins with the Where Are We Going? Chapter Openers, worked Examples with Yellow Markers that indicate the Process Standards throughout the text, to the Concept Maps, to the Section Question Sets with their refreshers of Process Standards, to the Chapter Organizers with Learning Outcomes and a list of the corresponding Review Questions, and finally, conclude at the Chapter Tests with their overarching Learning Outcomes.
