The human race is in crisis and very few of us – if any – are able to understand what is wrong with our lives and the world at large. How did this happen and how did humans become so 'disconnected' with humanity? Why are psychological disorders such as depression, anxiety, fear, and suicide on the increase, and why are conventional Western therapies unable to stem the tide? To approach this we must first look inside ourselves – to explore our own purpose in life and extend that principle to the rest of humanity. Despite the advances of modern Western psychology and the development of therapies that do help many, one area that is largely unexplored is that of the 'human spirit' and spirituality since it is more convenient to consider the human mind as 'machine' that responds to external stimuli. In this powerful exploration into the human mind and its relationship with the human spirit, Malik Badri invites the reader to open the door to self-discovery, purpose and spirituality through the practice of contemplation, reflection and meditation – understanding the true meaning and experience of spirituality as well as one's own place in Creation. Whilst central to worship in Islam, this will also be of great interest to, and help any reader wishing to explore the notion of spirituality whether as part of worship or simply as part of self development and inner healing.

A constructive critique of neuropsychological research on human consciousness and religious experience that applies the thought of Bernard Lonergan. Brain, Consciousness, and God is a constructive critique of neuroscientific research on human consciousness and religious experience. An adequate epistemology—a theory of knowledge—is needed to address this topic, but today there exists no consensus on what human knowing means, especially regarding nonmaterial realities. Daniel A. Helminiak turns to twentieth-century theologian and philosopher Bernard Lonergan's breakthrough analysis of human consciousness and its implications for epistemology and philosophy of science. Lucidly summarizing Lonergan's key ideas, Helminiak applies them to questions about science, psychology, and religion. Along with Lonergan, eminent theorists in consciousness studies and neuroscience get deserved, detailed attention. Helminiak demonstrates the reality of the immaterial mind and, addressing the Cartesian "mind-body problem," explains how body and mind could make up one being, a person. Human consciousness is presented not only as awareness of objects, but also as self-presence, the self-conscious experience of human subjectivity, a spiritual reality. Lonergan's analyses allow us to say exactly what "spiritual" means, and it need have nothing to do with God. Daniel A. Helminiak is Professor of Psychology at the University of West Georgia. He is the author of many books, including Religion and the Human Sciences: An Approach via Spirituality and The Human Core of Spirituality: Mind as Psyche and Spirit, both also published by SUNY Press.

Using both scientific and feminist approaches in its analysis, Sex and Gender: A Biopsychological Approach provides a current and comprehensive understanding of its titular topics, making it an invaluable textbook for instructors and students. Sex and gender can only be properly understood when examined in the contexts of biological, psychological, and social processes and the interactions between those processes. The structure of this book facilitates this necessary exhaustive discussion: First section: a biological analysis that discusses evolutionary, cellular, and genetic processes, and their effects on physical and behavioral development Second section: a psychological and sociological analysis that discusses stereotypes, sexism, and theories of gender Final section: a discussion of the current global challenges surrounding sex and gender, such as discrimination and religious and social oppression of various groups Across chapters: bonus features that can be used as discussion topics, student essay topics, or special topics for instructors to expand the text's discussion into the classroom The text's unique focus on biological, psychological, and social processes – as separate entities and interacting processes – make Sex and Gender crucial for a comprehensive and advanced understanding of the subject. This is an essential resource for instructors who want to bring a thorough and complex analysis of sex and gender studies to their classrooms.

This textbook details how mental health and addiction are interconnected through childhood trauma, how this affects neurobiology and neuropsychology, and the need for an integrated whole-person treatment for those of diverse backgrounds to enhance treatment outcomes. Using an integrative pedagogy, the book helps readers broaden their understanding of co-occurring disorders through case studies, learning objectives, key terms, quiz questions, suggested resources, and references. By linking to previous knowledge and suggesting practical applications, each chapter provides clear direction for learning more about each treatment approach, diagnosis, and population discussed within the multicultural and biopsychosocial perspective. Co-occurring Mental Illness and Substance Use Disorders will help graduate students in both substance use and mental health counseling make sense of integrative treatment with co-occurring disorders.

Serving students with academic deficiencies necessitates communication and collaboration among professionals from several disciplines. Academic Assessment and Intervention brings together divergent approaches in order to demonstrate that scientific evidence, rather than biases or previous practice, must determine assessment practices that are selected and used for particular purposes. Similar to a handbook in its comprehensive topical coverage, this edited collection provides a contextual foundation for academic assessment and intervention; describes both norm-referenced and curriculum-based assessment/measurement in detail; considers the implications of both of these assessments on ethnically diverse populations; provides a clear link between assessment, evidence-based interventions and the RTI model; and considers other important topics related to this area such as teacher behavior. Intended primarily for graduate-level courses in education, school psychology, or child clinical psychology, it will also be of interest to practicing professionals in these fields.
