The Art of Mixing Springer

David Gibson uses 3D visual representations of sounds in a mix as a tool to explain the dynamics that can be created in a mix. This book provides an in-depth exploration into the aesthetics of what makes a great mix. Gibson ' s unique approach explains how to map sounds

to visuals in order to create a visual framework that can be used to analyze what is going on in any mix. Once you have the framework down, Gibson then uses it to explain the traditions that have been developed over time by great recording engineers for different styles of music and songs. You will come to understand everything that can be done in a mix to create dynamics that affect people in really deep ways. Once you understand what engineers are doing to create the great mixes they do, you can then use this framework to develop your own values as to what you feel is a good mix. Once you have a perspective on what all can be done, you have the power to be truly creative on your own – to create whole new mixing possibilities. It is all about creating art out of technology. This book goes beyond explaining what the equipment does – it explains what to do with the equipment to make the best possible mixes.

In 1963, Nam June Paik created a new genre of exhibition with his first solo show, *The Exposition of Electronic Music-Electronic Television* at Galerie Parnass in Wuppertal, West Germany. Fresh from his studies with John Cage and Karlheinz Stockhausen, and already a Fluxus veteran, Paik created a disorienting environment that foreshadowed much of what was to come in the 1960s: visitors, greeted at the entrance by a freshly slaughtered ox head, were not only confronted with the newness of the electronic image in Paik's TV monitors, but also found themselves integrated into a Dadaistic installation that included prepared pianos, mechanical sound objects, record players and audio tape installations. Exposition reconstructs this landmark show.

Legendary musician Peter Hook tells the whole story - the fun, the music, the vast loss of money, the legacy - of Manchester's most iconic nightclub Peter Hook, as co-founder of Joy Division and New Order, has been shaping the course of popular music for thirty years. He provided the propulsive bass guitar melodies of 'Love Will Tear Us Apart' and the bestselling 12-inch single ever, 'Blue Monday' among many other songs. As co-owner of Manchester's Hacienda club, Hook propelled the rise of acid house in the late 1980s, then suffered through its violent fall in the 1990s as gangs, drugs, greed and a hostile police force destroyed everything he and his friends had created. This is his memory of that era and 'it's far sadder, funnier, scarier and stranger' than anyone has imagined. As young and naive musicians, the members of New Order were thrilled when their record label Factory opened a club. Yet as their career escalated, they toured the world and had top ten hits, their royalties were being ploughed into the Hacienda and they were only being paid £ 20 per week. Peter Hook looked back at that exciting and hilarious time to write HACIENDA. All the main characters appear - Tony Wilson, Barney, Shaun Ryder - and Hook tells it like it was - a rollercoaster of success, money, confusion and true faith.

Condition Monitoring and Diagnostic Engineering Management (COMADEM) is a relatively new field that has already made its mark in a wide range of industries. But all the signs are that even more will be required of researchers in the field over the next decade, for COMADEM directly addresses a whole range of issues that are likely to become increasingly important to companies as competitiveness increases along with the uncertainties resulting from rapid technological change. Already for example, businesses are having to scrutinize the economics of plant and machinery in greater detail than ever before; reliability is becoming a crucial factor as the costs of unscheduled breakdowns rise and there is increasing pressure on companies to demonstrate and assure improved health and safety conditions, especially in light of the growing number of catastrophic accidents

that have occurred throughout the world. Because it offers solutions to these and similar problems, COMADEM is now gaining an international reputation as a problem-solving, user-friendly and financially beneficial multi-discipline with immense potential. Many people at the senior management level are now convinced that COMADEM has much to offer and are wasting no time in reaping maximum benefit from the latest developments. The fact that the first UK informal seminar on COMADEM - COMADEM 88 - proved to be a great success and had a truly international flavour reflected this growing interest in the new field.
